

PROTECTIVE FILM-FORMING FILM, SHEET FOR FORMING PROTECTIVE
FILM, COMPLEX SHEET FOR FORMING PROTECTIVE FILM, AND INSPECTION
5 METHOD

Provided is a sheet (2) for forming protective film, including: a protective
film-forming film (1) characterized in that the light transmittance thereof at a wavelength
of 1600nm of 72% or more, and the light transmittance thereof at a wavelength of 550nm
10 of 20% or less; and a release sheet (21) laminated upon one or both faces of the
protective film-forming film (1). According to this sheet (2) for forming a protective film,
it is possible to form a protective film that allows for the inspection of cracks, etc., on a
workpiece or a product obtained by processing the workpiece, while preventing grinding
marks on the workpiece or the product from being visible to the naked eye.
