

**IMPROVED PROCESS FOR THE PREPARATION
OF POLYALKYLPHENOXYAMINOALKANES**

ABSTRACT OF THE DISCLOSURE

An improved process for the preparation of polyalkylphenoxyaminoalkanes which comprises the aminoethylation of a polyalkylphenol compound in the presence of a basic catalyst with 2-oxazolidinone or a derivative thereof having the following
5 formula:

wherein R_1 and R_2 are independently hydrogen or lower alkyl having 1 to about 6 carbon atoms and wherein the polyalkyl group of said polyalkylphenol has an average molecular weight in the range of about 600 to 5,000 and wherein the
10 process is carried out in the presence of an alcohol.
