

APPARATUS FOR PROCESSING PAPER OR OTHER LEAVES AND
PROGRAM FOR UPDATING IDENTIFICATION ALGORITHM

ABSTRACT

A processor (1) for processing paper or other leaves has a main controller (10) that reads an identification algorithm from a CD that is set in a CD drive (18) (s21) and installs the algorithm (s22). Furthermore, if a delete list is recorded on the CD that is set in the CD drive (18), the main controller (10) reads the delete list from the CD (s24). The main controller (10) reads the serial number and denomination of each paper note from the read delete list. If a hit serial number and a hit denomination are registered in a blacklist of serial numbers, the serial number is deleted from the blacklist (s25 to s28).
