(54) Title: METHOD AND SYSTEM FOR DEPLOYED SHIELDING AGAINST BALLISTIC THREATS

(57) Abstract: A system (100) shields field-deployable equipment from effects of nearby multi-directional threats, the equipment including or being mounted in association with a sensor unit (110) having at least one sensor operable to detect the motion of an in-flight projectile and to generate a nearby impact point determination. Shields (130) are mounted in spaced relationship with the equipment and adapted to be moved from a first position wherein the equipment is fully exposed to a second position wherein the equipment is at least partially shielded, and a control unit (150) is coupled to the shields and is responsive to detection of an in flight projectile prior to nearby impact for moving at least one of the shields from the first position to the second position.
