(54) Title: SYSTEM AND METHOD FOR PRINTER EMULATION

[Fig. 3]

(57) Abstract: A system and method are provided for accurately emulating a printer on a computing device that is not connected to the printer. The computing device is provided with firmware and programming code that interfaces with the firmware for a customized printing operation. The firmware is provided with the printer and the computing device. The programming code is provided with the computing device, and the computing device runs the programming code. The programming code interfaces with the firmware provided with the computing device and causes the computing device to emulate the printer, when the printer runs the programming code. The computing device and the printer are not connected.
