

ABSTRACT

A System and Method for Installing an Earth Tape

5 A system for installing an earth tape comprises a moveable support
arrangement (1) which is configured to be moved relative to an elongate
surface. The system further comprises a coil support apparatus (15) which is
configured to support a coil of earth tape, and a straightening apparatus (16)
10 which is configured to receive successive sections of earth tape from the coil
of earth tape. The straightening apparatus (16) straightens the successive
sections of earth tape and outputs the straightened sections of earth tape.
The coil support apparatus (15) and the straightening apparatus (16) are
carried by the support arrangement (1) and configured to be moved by the
support arrangement (1) relative to the elongate surface so that the
15 straightened sections of earth tape can be installed along at least part of the
elongate surface.
