

ABSTRACT

Disclosed in an embodiment of the present invention are a control method for a
5 duplicated data transmission function, a terminal and a computer storage medium, the
method comprising a terminal determining a bit in a received bit map according to
configured indication information corresponding to a data radio bearer (DRB) and/or a
preset rule, the bit map being one from among two received bit maps, the terminal
determining a duplicate data transmission function of the DRB to be
10 activated/deactivated on the basis of the indication of the bit.
