

[lacuna]

Abstract

A compound of formula (I) suitable as a catalyst or for the preparation of a catalyst system:

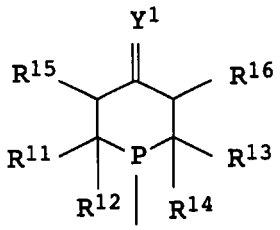

$$L^1 - X - L^2 \qquad (I)$$

is provided, in which

X is a lower alkylene group, an arylene group or an alkarylene group;

L^1 is

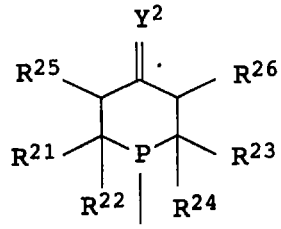

in which

Y^1 is oxygen, sulfur or N-R^{17},

R^{11}, R^{12}, R^{13}, R^{14}, R^{15}, R^{16} and R^{17} independently of one another being hydrogen, alkyl or aryl; and

L^2 is

in which

Y^2 is oxygen, sulfur or N-R^{27},

R^{21}, R^{22}, R^{23}, R^{24}, R^{25}, R^{26} and R^{27} independently of one another being hydrogen, alkyl or aryl,

it being possible for L^1 and L^2 to be identical or different.
