

REFRIGERATOR

Abstract

A refrigerator having an automatic ice making device which will be shown in the following is provided: (1) the whole water supply route can be cleaned; (2) a water
5 supplying tank and a water supply route can be easily attached/detached; and (3) the water supply route is shortened, and thereby cleaning can be done more easily. In the refrigerator according to the present invention, the water supplying tank is detachably attached to a refrigerating chamber so as to slide in a back and forth direction of the refrigerating chamber, and a water receiving part to which a discharge pipe is fitted
10 through a pipe packing is detachably retained by an electric component retaining member.
