(54) Title: NANOPARTICULATE QUINAZOLINE DERIVATIVE FORMULATIONS

(57) Abstract: The present invention is directed to nanop articulate quinazoline derivative compositions having improved pharmacokinetic profiles and reduced fed/fasted variability. The nanoparticulate quinazoline derivative particles of the composition have an effective average particle size of less than about 2000 nm and are useful in the treatment of hyperproliferative disorders, such as cancer and other neoplastic diseases. The compositions may include quinazomiamine derivatives such as erlotinib or a salt thereof.
