(54) Title: WASTE OUTLET

(57) Abstract

A waste outlet has a clamping ring (12) which seats a flared filler tube (18). The tube (18) directs water into a well in which the water rises and overflows into the bowl (2) of the outlet (4). The filler tube (18) contains a solids filter disc (44) which is connected to the filler tube (18). When the cover is removed, the tube (18) and the disc (44) are removable as a pair. The disc (44) cleans the well as it is retracted. The disc (44) drops clear of the tube (18) allowing the disc (44) to be cleaned before re-insertion. A version for spa baths has a screw operated disc for making the outlet function as a plug. A rectangular grooved drainage plate for draining tiles directly through slots in the ring is provided with the waste outlet as a version for shower slabs.
