DATA QUERY METHOD AND SYSTEM, AND STORAGE MEDIUM

ABSTRACT

This specification provides a data query method and system, and a storage medium, including: obtaining indicator data of a plurality of data sources in response to a data query request, where indicator data of one data source represents query performance of the data source in a historical period; sorting the plurality of data sources based on the indicator data of the plurality of data sources, to obtain a target order; and performing a data query in at least some of the plurality of data sources based on the target order, to obtain a data query result.
