

ABSTRACT

An outdoor unit B includes an indication cover 70 including a cover portion 71 on which at least one of a type of refrigerant employed and a caution are marked, the cover portion 71 being disposed so as to cover a hexagonal column-shaped outer circumference of a sealing hexagon nut 24, a ring portion 73 attached to a gas-side valve 9 which is the refrigerant pipe connection valve, and a joint portion 72 formed so as to be bendable and connecting between the cover portion 71 and the ring portion 73.
