

【ABSTRACT】

The present specification describes a method for manufacturing porous inorganic particles and a light-reflecting composition comprising porous inorganic particles, the method comprising the steps of: a) forming crosslinked polymer particles; b) forming a shell from an inorganic precursor on each of the particles in step a) to produce core-shell particles; c) forming an emulsion including the multiple core-shell particles and an organic solvent in an inner phase thereof; d) removing the organic solvent from the emulsion; and e) calcining the resulting product in step d) to form porous inorganic particles.
