(54) Title: SYSTEMS AND METHODS FOR INTERRUPTED PROGRAM RECORDING

FIG. 5

(57) Abstract: Program recording systems and methods are operable to adjust recording times of a program of interest in response to an occurrence of an interrupting program that alters the scheduled recording times of the program of interest. An exemplary embodiment receives an unscheduled program flag (UPF) corresponding to an occurrence of an unscheduled program; adjusts at least one of a scheduled recording start time associated with the program of interest to an updated record start time and a scheduled recording end time associated with the program of interest to an updated record end time in response to receiving the UPF; and records the program of interest based upon at least one of the updated record start time and the updated record end time.
