

ABSTRACT

A data processing method, a terminal device and a data processing system. The method comprises: receiving communication information broadcasted by means of wireless
5 communication, wherein the communication information comprises feature information and a payment channel identifier of a second terminal device; acquiring its own feature information; when its own feature information matches the feature information in the communication information, generating a payment code based on the payment channel identifier. By means of the data processing method, the terminal device and the data processing system, the user experience
10 can be improved.
