

Abstract

A method for mounting a conveyor chain (5) for a pallet belt (3) of a moving walkway (1), and a conveyor chain (5) are proposed. Provided elongated connecting elements (39) for fastening pallets (7) are coupled in one coupling process to one another and to chain links (27), which are coupled to one another, such that (i) the connecting elements (39) are arranged one behind the other parallel to the extension direction (17) of the conveyor chain (5), (ii) each of the connecting elements (39) is coupled at a first end (41) to an associated first one of the two-piece chain pins (37), and at a second end (43), each of the connecting elements (39) is coupled to an associated second one of the two-piece chain pins (37), wherein a connecting element spacing distance (T2) between the first and second two-piece chain pin (37) is an integral multiple of the chain spacing distance (T1).
