APPRECIABLE JEWELRY BOX

ABSTRACT

An appreciable jewelry box includes a base cover and an upper cover. The base cover provides slit for locating jewelry and the upper cover detachably fits with the base cover. At least an observation hole is provided in the upper cover corresponding to the slit and a magnifying lens is fixed in the observation hole in a way of the circumferential side thereof being inset an inner wall of the observation hole with a blue color layer being arranged at the surface of inner wall underneath the lens. Once jewelry is located at the slit, the jewelry is capable of being appreciated through the lens without opening the upper cover.
