(54) Title: SEARCHING AND NAMING ITEMS BASED ON METADATA

(57) Abstract: A user interface may be provided that allows a user to select one or more stored items and display metadata attributes for those items. The user may further specify modifiers for one or more of the metadata attributes and perform searches based on selected ones of the metadata attributes and/or selected ones of the modifiers. In addition, a descriptive phrase may be automatically generated for one or more items. The descriptive phrase may be generated based on one or more of the metadata attributes. In doing so, metadata attributes may be converted to more user-friendly forms and collected into a sentence or other phrase. The descriptive phrase may be attached to the one or more items.
