

ABSTRACT
MANAGEMENT SYSTEM

A management system for managing game token (1001)
5 includes, a holder identification device for identifying
the holder of the game token (1001) by referring to a
memory that stores the holder of the game token (1001) when
a game token (1001) is used, a player identification device
for identifying the player who used the game token (1001)
10 when the game token (1001) is used, and a controller (1003)
that generates an error signal when the holder identified
by the holder identification device and the player
identified by the player identification device do not match
for the game token (1001) that have been used.
