

Figure 1

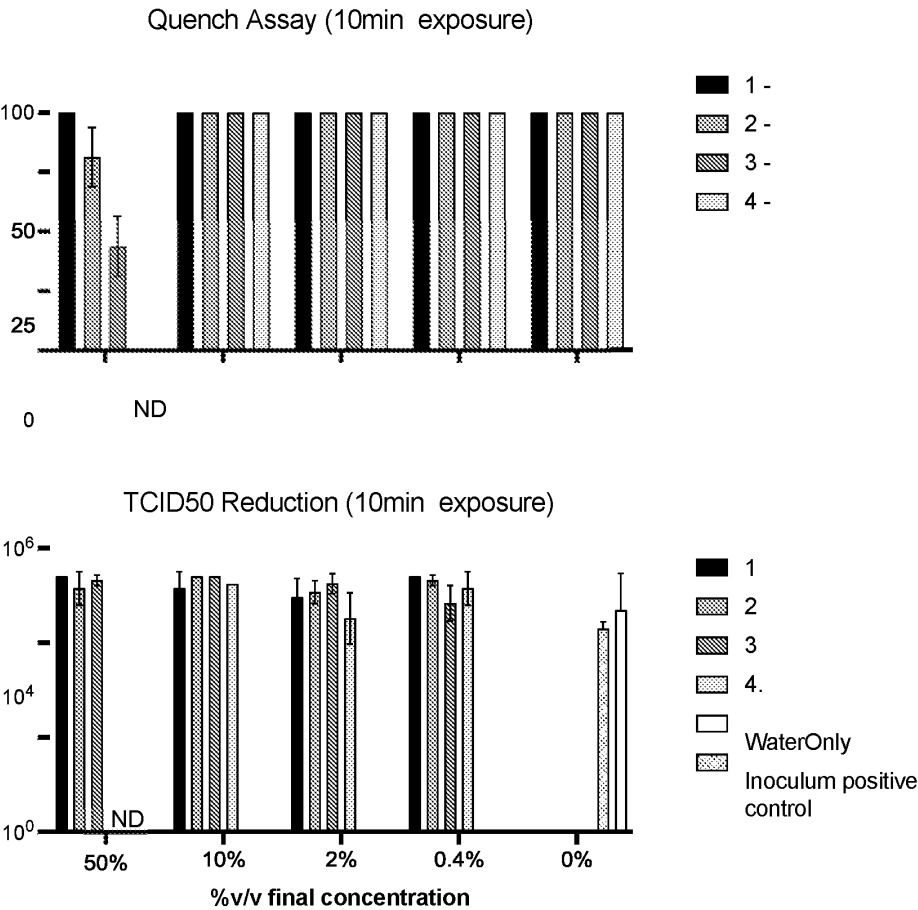

Figure 2

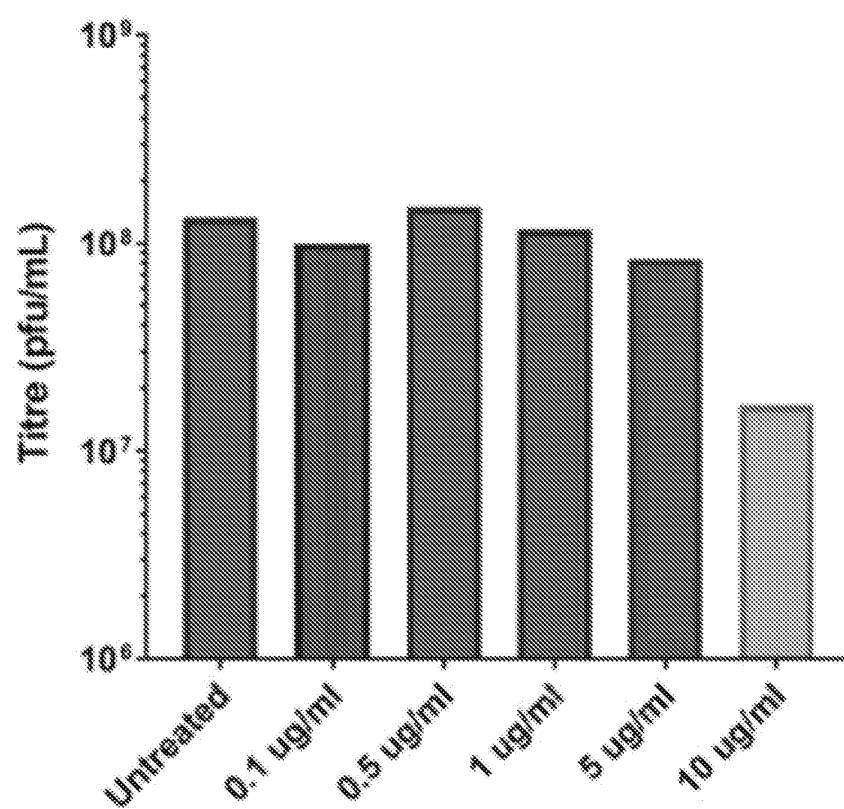

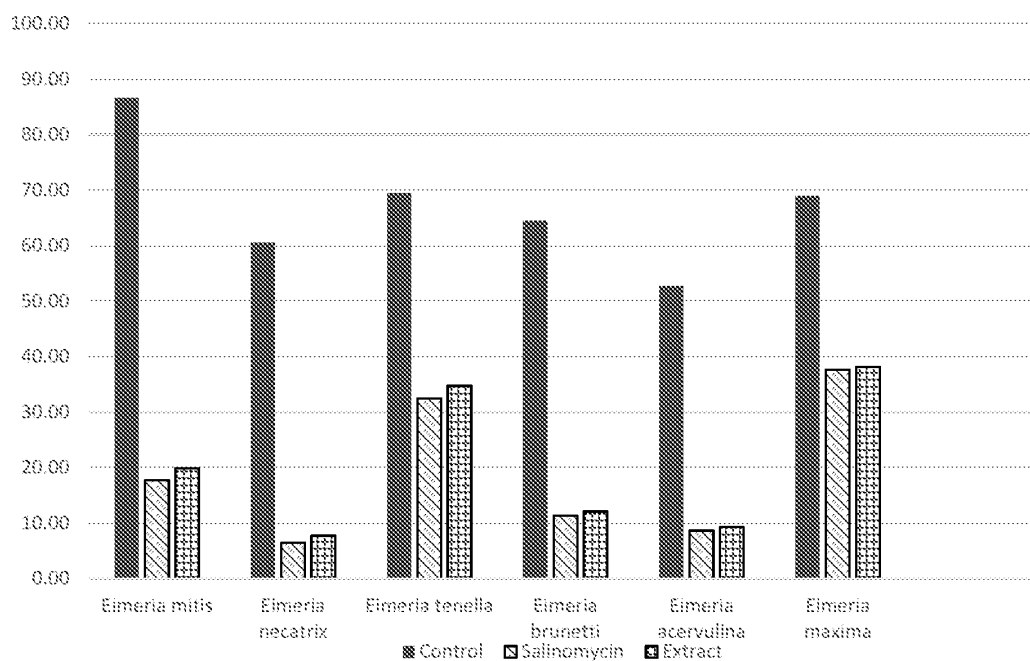

Figure 3

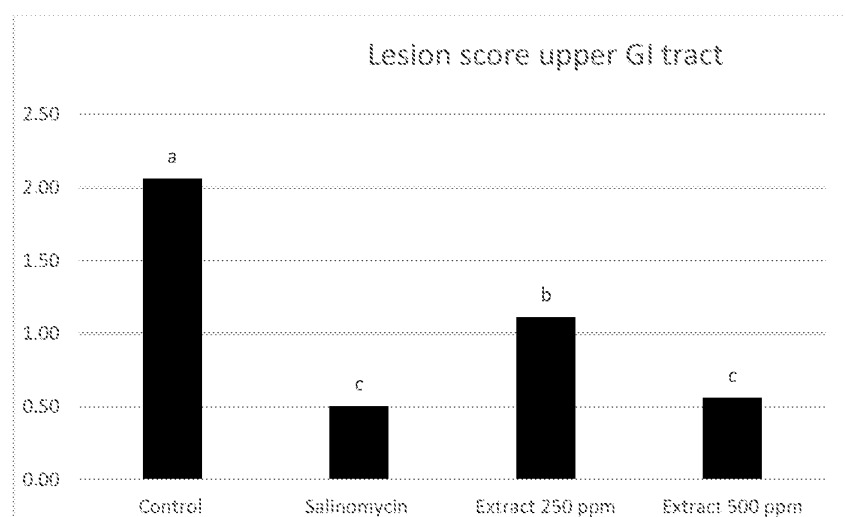

Number of *Eimeria* sporozoites after 14 hours incubation at 37°C.

No statistically significant difference between salinomycin and extract for all results.

Highly statistically significant ($P < 0.001$) difference between controls and salinomycin/extract for all results.

Highly statistically significant ($P < 0.001$) difference between controls and extract for all results.

Figure 4

- Difference in superscripts (a,b,c) denotes statistically significant difference $P < 0.05$.
