(54) Title: DEVICE AND METHOD FOR CONFIGURING A PROCESS

FIG 6

(57) Abstract: Aspects concern a method for configuring a process comprising converting a neural network trained to map process inputs to process outputs to operate on data in encrypted domain of a predetermined encryption and decryption scheme such that the encryption of the encryption and decryption scheme is homomorphic with respect to the operation of the converted neural network, determining a desired process output in encrypted domain, determining an input in encrypted domain to the converted neural network leading to an output of the converted neural network approximating the desired process output in encrypted domain and providing the determined input for configuration of the process.
