(54) Title: SHEET MATERIAL DISPENSER

(57) Abstract

A dispenser (40) for center feed roll products (42) includes a base (44) and a cover (62) adapted to fit the base (44). The cover (62) further defines a cavity to receive the center feed roll product (42). The base (44) further includes a roll platform (46) and a securing means (52). The securing means (52) defining an aperture (48) is coupled to the roll platform (48) and is adapted to support a center feed roll product (42). In addition, the securing means (52) permits the installation of a roll product (42) through the aperture (48) and prevents the removal of the roll product (42).
