

ABSTRACT

APP SYSTEM FOR CLEANING MANAGEMENT AND SERVICE

5 An APP system for cleaning management and service includes an application
system (12) provided in a terminal device (10), the application system (12) including a
user identification module (14), the user identification module (14) having at least one
manager module (20), at least one on-site staff module (30), at least one employee
module (40), and at least one service employee module (50). The APP system allows
10 a user to know the current cleaning status and report complaints to an employee in
charge of the cleaning, thereby improving cleaning management quality.
