

ABSTRACT

A swab for cleaning electrical and electro-mechanical components includes a handle defining a longitudinal axis and having a cleaning head end and a grasping end. The cleaning head end is formed to define a taper. A fabric cleaning end is
5 formed by forming a fabric around the handle at the taper. A conical cleaning head is formed and is sealed to the handle at a juncture of the cleaning head end and the grasping end to define a circumferential handle seal. The fabric is further sealed along the taper to define a longitudinal seal. A method for making the swab is also disclosed.
