(54) Title: WIPER PACKAGING INCORPORATING MAGNETIC SEAL

(57) Abstract: A containment package for presaturated wiper sheets including a substantially liquid and vapor impermeable body having an interior adapted to receive and store a plurality of wiper sheets presaturated with a solution subject to evaporation. The body includes an access opening adapted for insertion and withdrawal of the wiper sheets through the access opening. At least a first sealing element defining a magnet is supported on a first support structure at a position outside of the interior. At least a second sealing element with magnetic attraction to the first sealing element is disposed on a second support structure at a position outside of the interior. The second support structure is selectively moveable relative to the first support structure to open and close the access opening such that with the first support structure disposed in contacting, opposing relation to the second support structure, the sealing elements will act through the first support structure and the second support structure to cooperatively form a magnetic seal so as to reversibly seal the access opening in a closed condition. A method of packaging presaturated wiper sheets is also provided.
