(54) Title: INK-JET PRINTABLE MICROPOROUS FILM

(57) Abstract

Ink-jet receptor media are disclosed that have both a fluid management system and a pigment management system for use with pigmented ink-jet inks that produce vibrant, durable images. The fluid management system is provided by microporous media with the presence of surfactants, if needed. The pigment management system is provided by either fluorinated silica particles or inorganic multivalent metal salts impregnated into pores of the microporous media. Methods of making and using are also disclosed.
