

PROCESSING MACHINE

ABSTRACT OF THE DISCLOSURE

A processing machine includes a chuck table, a chuck table cover having an opening through which a holding surface of the chuck table can protrude, a processing unit having a spindle, a spindle housing, and a mount portion arranged on a lower end portion of the spindle, the processing unit being configured to process a workpiece by a processing tool mounted on a lower part of the mount portion, a processing chamber construction cover that covers the chuck table and the mount portion. The processing machine further includes a processing tool cover that is secured to a lower end portion of the spindle housing and that has an upper wall and a side wall that extends downwardly from the upper wall. The processing tool cover is disposed inside the processing chamber construction cover and covers the processing tool from above and sides.
