

ABSTRACT

A storage equipment (U) includes a storage device (1), an object delivery platform (2), an object storage and extraction device (3), and a control device (4). The storage device (1) includes a rotating module (11) and a storage module (12). The rotating module (11) drives the storage module (12) to rotate. The control device (4) is electrically connected to the storage device (1) and the object storage and extraction device (3). The control device (4) can control the rotating module (11) according to an object outbound command (21) to drive the storage module (12) to rotate, so that the storage module (12) rotates to a storage and extraction position. The control device (4) can control the object storage and extraction device (3) according to the object outbound command (21) to move the object from the object delivery platform (2) to the storage device (1) or from the storage device (1) to the object delivery platform (2).
