

ABSTRACT

A beverage discharge cock includes a valve main body including a hole and a valve seat arranged in an end portion of the hole, a valve rod slidably arranged in the hole, and including a valve body that forms a first valve together
5 with the valve seat of the valve main body, and a first seal, and a movable part slidably arranged in the hole, and including a second seal facing the first seal, the second seal forming a second valve together with the first seal of the valve rod. The valve rod includes a first channel extending through the valve body, and one or a plurality of second channels extending from the first seal to the first channel.
10 The second channel includes a first portion, and a second portion arranged between the first seal and the first portion, and a diameter of the second portion is smaller than a diameter of the first portion.
