

ROBOTIC ARM ASSEMBLY CONSTRUCTION

ABSTRACT

A method (200) for constructing a robotic arm (104) includes positioning (202) a wire (120) in a formation zone (124) for the robotic arm (104); and forming (206) a body (126) of the robotic arm (104) in the formation zone (124) around the wire (120) such that the body (126) of the robotic arm (104) encloses at least a portion of the wire (120).
