(54) Title: PROTECTIVE COVER FOR A MEDICAL DEVICE

FIG. 2B

(57) Abstract: A medical device may include a distal connector, which may include a first lever arm and a second lever arm. A distal end of the first lever arm and a first end of the second lever arm may include a first protrusion and a second protrusion, respectively. The distal connector may include a blunt cannula disposed between the first lever arm and the second lever arm. The medical device may include a cover coupled to the distal connector and having an annular wall surrounding the blunt cannula. The first protrusion and the second protrusion may contact at least one catch disposed on an outer surface of the annular wall. A proximal end of the first lever arm and a proximal end of the second lever arm may be configured to be pinched together to remove the first protrusion and the second protrusion from the at least one catch.
