(54) **Title:** PROVISIONING UE POLICY WHEN A UE IS ATTACHED IN AN EVOLVED PACKET SYSTEM

Fig. 7

(57) **Abstract:** Various aspects of the present disclosure relate to a first network function in a first mobile communication network, the first mobile communication network supporting connectivity in an Evolved Packet System (EPS) access that has an active policy association for a UE with a second network function, the first network function comprising: at least one memory; and at least one processor coupled with the at least one memory. The processor is configured to cause the first network function to: receive a first request comprising an active policy association request including a UE Policy Container; determine to trigger a UE Policy Delivery to the UE the determination based on the UE Policy Container received in the first request; and trigger a PDN-GW Bearer Modification without QoS update by sending a second request to a second network function wherein the second request is an Update Bearer Request that includes the UE Policy Container within a Protocol Configuration.
