

SYSTEM AND METHOD FOR SECURING MULTIPLE ITEMS OF EQUIPMENT

ABSTRACT OF THE DISCLOSURE

Systems and methods for securing multiple items of equipment are disclosed. A system for securing an imaging
5 device and one or more recording medium trays associated with the imaging device may include an imaging device chassis, a lock configured to engage with the imaging device chassis, a cable, and at least one recording medium tray. The cable may have a first end coupled to the lock and a second end
10 configured to couple to a substantially immobile object to secure the imaging device chassis to the substantially immobile object. The at least one recording medium tray may be configured to receive the cable to secure the at least one tray in the imaging device chassis when the lock is engaged
15 with the imaging device chassis.
