(54) Title: GLOVE WITH LIQUID STORAGE AND DISPENSATION CAPABILITIES

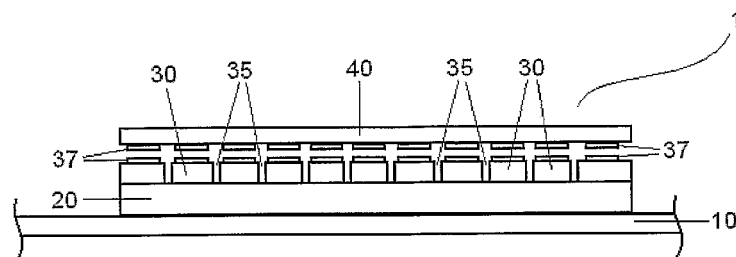

Figure 1

(57) Abstract: The present invention is a hand covering such as a glove that is adapted to absorb and store an amount of liquid within an adsorbent layer incorporated into the glove. The liquid can be easily dispensed by certain movements of the hand such as squeezing or grasping. The glove design allows another, external layer purpose-engineered for particular applications to be either permanently or detachably attached on the exterior of the glove. The rubber used is a composite comprising 10-20 % nitrile and the remaining 80-90 % natural latex.
