

BOTTLE

ABSTRACT

5 Bottle (1) of the present disclosure is bottle (1) in a columnar shape for storing a liquid that generates gas, the bottle including: body part (3) that stores the liquid; spout (5) provided on an upper surface of body part (3) and opened to the outside; lid (9) that openably covers spout (5); and packing (2) that is attached between an opening of spout (5) and lid (9) and allows the gas to pass packing (2) without allowing the liquid to pass the
10 packing. Body part (3) includes first column part (15) having a semicircular columnar shape in which spout (5) is provided on an upper surface of first column part (15), and second column part (11) having a columnar shape in which a cross-sectional area becomes smaller as relatively separating from spout (5).
