(54) Title: TECHNIQUES TO OPERATE A SERVICE WITH MACHINE GENERATED AUTHENTICATION TOKENS

FIG. 1

(57) Abstract: Techniques to operate a service with machine generated authentication tokens comprising a authentication token management component to establish a secure connection with a client device based at least partially on client authentication information associated with a first account of the client, receive a request for account information of one or more accounts associated with the first account of the client, provide account information for a second account associated with the first account to the client via the client device, receive a request to generate an authentication token for the second account, validate the request to generate the authentication token based on the client authentication information associated with the client, and a token generation component to generate the authentication token for the second account. Other embodiments are described and claimed.
