

CONJUGATED DIENE POLYMER, CONJUGATED DIENE POLYMER COMPOSITION, AND METHOD FOR PRODUCING CONJUGATED DIENE POLYMER

Technical Field

The present invention relates to a conjugated diene polymer, a conjugated diene polymer composition, and a method for producing a conjugated diene polymer.

Background Art

In recent years, with the growing concern over environmental problems the demand for good fuel economy for automobiles has been becoming stronger, and there is also a demand for excellent fuel economy for polymer compositions used for automobile tires. As a polymer composition for automobile tires, a polymer composition comprising a conjugated diene polymer such as polybutadiene or a butadiene-styrene copolymer and a filler such as carbon black or silica, etc. is used.

For example, a polymer composition employing as the conjugated diene polymer a polymer formed by modifying with bis(dimethylamino)methylvinylsilane one terminus of a polymer formed by copolymerizing butadiene and styrene using an alkyl lithium as a polymerization initiator (see e.g. JP-A-1-217048) is known. Furthermore, a polymer composition employing as the conjugated diene polymer a polymer formed by modifying with a dialkylamino group-containing acrylamide one terminus of a polymer formed by copolymerizing butadiene and styrene using an alkyl lithium as a polymerization initiator (see e.g. JP-A-1-217047), a polymer composition employing as the conjugated diene polymer a polymer formed by modifying with a dialkylamino group-containing alkoxysilane one terminus of a polymer formed by polymerizing butadiene or copolymerizing butadiene and styrene, using an alkyl lithium as a polymerization initiator (see e.g. JP-A-63-186748, JP-A-2005-290355), etc. have been proposed as polymer compositions having good

fuel economy.

Disclosure of the Invention

However, the above-mentioned conventional polymer compositions employing a conjugated diene polymer are not always satisfactory in terms of fuel economy.

Under such circumstances, an object of the present invention is to provide a conjugated diene polymer that can give a polymer composition having excellent fuel economy, a polymer composition formed by combining the conjugated diene polymer and a filler such as silica, and a method for producing the conjugated diene polymer.

A first aspect of the present invention relates to a conjugated diene polymer comprising a conjugated diene-based monomer unit and a constituent unit of formula (I) below, at least one terminus of the polymer being modified by a compound of formula (II) below,

wherein X^1 , X^2 , and X^3 independently denote a group of formula (Ia) below, a hydrocarbyl group, or a substituted hydrocarbyl group, and at least one of X^1 , X^2 , and X^3 is a group of formula (Ia) below or a hydroxy group,

wherein R^1 and R^2 independently denote a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl group, or a substituted silyl group, and R^1 and R^2 may be bonded so as to form, together with the nitrogen atom, a ring structure,

wherein n denotes an integer of 1 to 10, R^3 , R^4 , and R^5 independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1 to 4 carbon atoms, at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group, and A denotes a nitrogen atom-containing functional group.

A second aspect of the present invention relates to a conjugated diene polymer composition comprising the above-mentioned conjugated diene polymer and a filler.

A third aspect of the present invention relates to a method for producing a conjugated diene polymer, comprising step A and step B below.

step A: a step of polymerizing monomers comprising a conjugated diene and a vinyl compound of formula (III) below in a hydrocarbon solvent by an alkali metal catalyst, thus giving a polymer having an alkali metal originating from the catalyst at at least one terminus of a polymer chain comprising a conjugated diene-based monomer unit and a monomer unit based on the vinyl compound of formula (III) below,

wherein X^4 , X^5 , and X^6 independently denote a group of formula (IIIa) below, a hydrocarbyl group, or a substituted hydrocarbyl group, and at least one of X^4 , X^5 , and X^6 is a group of formula (IIIa) below,

wherein R^8 and R^9 independently denote a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl

group, or a substituted silyl group, and R^8 and R^9 may be bonded so as to form, together with the nitrogen atom, a ring structure.

step B: a step of reacting the polymer obtained in step A and a compound of formula (II) below,

wherein n denotes an integer of 1 to 10, R^3 , R^4 , and R^5 independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1 to 4 carbon atoms, at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group, and A denotes a nitrogen atom-containing functional group.

In accordance with the present invention, there can be provided a conjugated diene polymer that can give a polymer composition having excellent fuel economy, a polymer composition formed by combining the conjugated diene polymer and a filler such as silica, and a method for producing the conjugated diene polymer. The polymer composition has excellent fuel economy.

Mode for Carrying Out the Invention

The conjugated diene polymer of the present invention is a conjugated diene polymer having a conjugated diene-based constituent unit and a constituent unit of formula (I) below, at least one terminus of the polymer being modified by a compound of formula (II) below,

wherein X^1 , X^2 , and X^3 independently denote a group of formula (Ia) below, a hydroxy group, a hydrocarbyl group, or a substituted hydrocarbyl group, and at least

one of X^1 , X^2 , and X^3 is a group of formula (Ia) below or a hydroxy group,

wherein R^1 and R^2 independently denote a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl group, or a substituted silyl group, and R^1 and R^2 may be bonded so as to form, together with the nitrogen atom, a ring structure,

wherein n denotes an integer of 1 to 10, R^3 , R^4 , and R^5 independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1 to 4 carbon atoms, at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group, and A denotes a nitrogen atom-containing functional group.

Examples of the conjugated diene-based constituent unit include 1,3-butadiene, isoprene, 1,3-pentadiene, 2,3-dimethyl-1,3-butadiene, and 1,3-hexadiene, and one type thereof may be used or two or more types may be used. From the viewpoint of ready availability, 1,3-butadiene and isoprene are preferable.

X^1 , X^2 , and X^3 of the constituent unit of formula (I) independently denote a group of formula (Ia), a hydroxy group, a hydrocarbyl group, or a substituted hydrocarbyl group, and at least one of X^1 , X^2 , and X^3 is a group of formula (Ia) or a hydroxy group.

R^1 and R^2 in formula (Ia) independently denote a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl group, or a substituted silyl group, and R^1 and R^2 may be bonded so as to form, together with the nitrogen atom, a ring structure.

In the present specification, the hydrocarbyl group denotes a hydrocarbon residue. The substituted hydrocarbyl group denotes a group in which at least one

hydrogen atom of the hydrocarbon residue is replaced by a substituent. The hydrocarbyloxy group denotes a group in which the hydrogen atom of a hydroxy group is replaced by a hydrocarbyl group, and the substituted hydrocarbyloxy group denotes a group in which at least one hydrogen atom of a hydrocarbyloxy group is replaced by a substituent. The substituted silyl group denotes a group in which at least one hydrogen atom of a silyl group is replaced by a substituent.

Examples of the hydrocarbyl group having 1 to 6 carbon atoms denoted by R^1 and R^2 include an alkyl group such as a methyl group, an ethyl group, an *n*-propyl group, an isopropyl group, an *n*-butyl group, a *sec*-butyl group, a *tert*-butyl group, an *n*-pentyl group, a neopentyl group, an isopentyl group, or an *n*-hexyl group; a cycloalkyl group such as a cyclohexyl group; and a phenyl group.

Examples of the substituted hydrocarbyl group having 1 to 6 carbon atoms denoted by R^1 and R^2 include a substituted hydrocarbyl group having as a substituent at least one type of group selected from the group consisting of a nitrogen atom-containing group, an oxygen atom-containing group, and a silicon atom-containing group. Examples of a group having a nitrogen atom-containing group as a substituent include a dialkylaminoalkyl group such as a dimethylaminoethyl group or a diethylaminoethyl group, examples of a group having an oxygen atom-containing group as a substituent include an alkoxyalkyl group such as a methoxymethyl group, a methoxyethyl group, an ethoxymethyl group, or an ethoxyethyl group, and examples of a group having a silicon atom-containing group as a substituent include a trialkylsilylalkyl group such as a trimethylsilylmethyl group.

Examples of the substituted silyl group denoted by R^1 and R^2 include a trialkylsilyl group such as a trimethylsilyl group, a triethylsilyl group, or a *t*-butyldimethylsilyl group.

As a group in which R^1 and R^2 are bonded, a divalent group having 1 to 12 carbon atoms, which may have at least one type of atom selected from the atomic group consisting of a nitrogen atom, an oxygen atom, and a silicon atom, can be cited. Examples thereof include an alkylene group such as a trimethylene group, a

tetramethylene group, a pentamethylene group, or a hexamethylene group; an oxydialkylene group such as an oxydiethylene group or an oxydipropylene group; and a nitrogen-containing group such as a group represented by $-\text{CH}_2\text{CH}_2\text{-NH-CH}_2-$ or a group represented by $-\text{CH}_2\text{CH}_2\text{-N=CH-}$.

The group in which R^1 and R^2 are bonded is preferably a nitrogen-containing group, and more preferably a group represented by $-\text{CH}_2\text{CH}_2\text{-NH-CH}_2-$ or a group represented by $-\text{CH}_2\text{CH}_2\text{-N=CH-}$.

The hydrocarbyl group denoted by R^1 and R^2 is preferably an alkyl group, more preferably an alkyl group having 1 to 4 carbon atoms, yet more preferably a methyl group, an ethyl group, an *n*-propyl group, or an *n*-butyl group, and particularly preferably an ethyl group or an *n*-butyl group. The substituted hydrocarbyl group denoted by R^1 and R^2 is preferably an alkoxyalkyl group, and more preferably an alkoxyalkyl group having 1 to 4 carbon atoms. The substituted silyl group denoted by R^1 and R^2 is preferably a trialkylsilyl group, and more preferably a trimethylsilyl group.

R^1 and R^2 are preferably an alkyl group, an alkoxyalkyl group, a substituted silyl group, or a nitrogen-containing group in which R^1 and R^2 are bonded, more preferably an alkyl group, yet more preferably an alkyl group having 1 to 4 carbon atoms, and still more preferably a methyl group, an ethyl group, an *n*-propyl group, or an *n*-butyl group.

Examples of the group of formula (Ia) include an acyclic amino group and a cyclic amino group.

Examples of the acyclic amino group include a dialkylamino group such as a dimethylamino group, a diethylamino group, a di(*n*-propyl)amino group, a di(isopropyl)amino group, a di(*n*-butyl)amino group, a di(sec-butyl)amino group, a di(*tert*-butyl)amino group, a di(neopentyl)amino group, or an ethylmethylanino group; a di(alkoxyalkyl)amino group such as a di(methoxymethyl)amino group, a di(methoxyethyl)amino group, a di(ethoxymethyl)amino group, or a di(ethoxyethyl)amino group; and a di(trialkylsilyl)amino group such as a

di(trimethylsilyl)amino group or a di(*t*-butyldimethylsilyl)amino group.

Examples of the cyclic amino group include a 1-polymethyleneimino group such as a 1-pyrrolidinyl group, a 1-piperidino group, a 1-hexamethyleneimino group, a 1-heptamethyleneimino group, a 1-octamethyleneimino group, a 1-decamethyleneimino group, or a 1-dodecamethyleneimino group. Further examples of the cyclic amino group include a 1-imidazolyl group, a 4,5-dihydro-1-imidazolyl group, a 1-imidazolidinyl group, a 1-piperazinyl group, and a morpholino group.

From the viewpoint of economy and ready availability, the group of formula (Ia) is preferably an acyclic amino group, more preferably a dialkylamino group, yet more preferably a dialkylamino group substituted with an alkyl group having 1 to 4 carbon atoms, and still more preferably a dimethylamino group, a diethylamino group, a di(*n*-propyl)amino group, or a di(*n*-butyl)amino group.

Examples of the hydrocarbyl group denoted by X^1 to X^3 of formula (I) include an alkyl group such as a methyl group, an ethyl group, an *n*-propyl group, an isopropyl group, an *n*-butyl group, a *sec*-butyl group, or a *tert*-butyl group. Furthermore, examples of the substituted hydrocarbyl group include an alkoxyalkyl group such as a methoxymethyl group, an ethoxymethyl group, a methoxyethyl group, or an ethoxyethyl group.

The hydrocarbyl group denoted by X^1 to X^3 is preferably an alkyl group, more preferably an alkyl group having 1 to 4 carbon atoms, and yet more preferably a methyl group or an ethyl group. Furthermore, the substituted hydrocarbyl group denoted by X^1 to X^3 is preferably an alkoxyalkyl group, and more preferably an alkoxyalkyl group having 1 to 4 carbon atoms.

The hydrocarbyl group or substituted hydrocarbyl group denoted by X^1 to X^3 is preferably an alkyl group or an alkoxyalkyl group, more preferably an alkyl group having 1 to 4 carbon atoms or an alkoxyalkyl group having 1 to 4 carbon atoms, yet more preferably an alkyl group having 1 to 4 carbon atoms, and still more preferably a methyl group or an ethyl group.

At least one of X^1 , X^2 , and X^3 of formula (I) is a group of formula (Ia) or a

hydroxy group. It is preferable that two or more of X^1 , X^2 , and X^3 are a group of formula (Ia) or a hydroxy group, and it is more preferable that two of X^1 , X^2 , and X^3 are a group of formula (Ia) or a hydroxy group.

Examples of the constituent unit of formula (I) include a vinyl compound-based constituent unit of formula (III), which is described later. It is preferably a vinyl compound-based constituent unit of formula (III) in which two of X^4 , X^5 , and X^6 are acyclic amino groups, and from the viewpoint of fuel economy and grip properties is more preferably a bis(dialkylamino)alkylvinylsilane-based constituent unit, and yet more preferably a bis(dimethylamino)methylvinylsilane-based constituent unit, a bis(diethylamino)methylvinylsilane-based constituent unit, a bis(di(*n*-propyl)amino)methylvinylsilane-based constituent unit, or a bis(di(*n*-butyl)amino)methylvinylsilane-based constituent unit. Among them, from the viewpoint of ready availability of the compound, a bis(diethylamino)methylvinylsilane-based constituent unit and a bis(di(*n*-butyl)amino)methylvinylsilane-based constituent unit are preferable.

From the viewpoint of fuel economy and grip properties, the content of the constituent unit of formula (I) in the conjugated diene polymer, per unit weight of the polymer, is preferably not less than 0.001 mmol/g (polymer) and not more than 0.1 mmol/g (polymer), more preferably not less than 0.002 mmol/g (polymer) and not more than 0.07 mmol/g (polymer), and yet more preferably not less than 0.003 mmol/g (polymer) and not more than 0.05 mmol/g (polymer).

The conjugated diene polymer of the present invention is a polymer having at least one terminus of the polymer modified with a compound of formula (II) below,

wherein *n* denotes an integer of 1 to 10, R^3 , R^4 , and R^5 independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1

to 4 carbon atoms, at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group, and A denotes a nitrogen atom-containing functional group.

R^3 , R^4 , and R^5 in formula (II) independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1 to 4 carbon atoms, and at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group.

Examples of the hydrocarbyl group denoted by R^3 , R^4 , and R^5 include an alkyl group such as a methyl group, an ethyl group, an *n*-propyl group, an isopropyl group, an *n*-butyl group, a *sec*-butyl group, or a *tert*-butyl group. Furthermore, examples of the hydrocarbyloxy group denoted by R^3 , R^4 , and R^5 include an alkoxy group such as a methoxy group, an ethoxy group, an *n*-propoxy group, an isopropoxy group, an *n*-butoxy group, a *sec*-butoxy group, or a *t*-butoxy group.

The hydrocarbyl group denoted by R^3 , R^4 , and R^5 is preferably an alkyl group, more preferably an alkyl group having 1 to 3 carbon atoms, and yet more preferably a methyl group or an ethyl group. Furthermore, the hydrocarbyloxy group denoted by R^3 , R^4 , and R^5 is preferably an alkoxy group, more preferably an alkoxy group having 1 to 3 carbon atoms, and yet more preferably a methoxy group or an ethoxy group.

With regard to R^3 , R^4 , and R^5 , from the viewpoint of enhancing fuel economy it is preferable for at least two of R^3 , R^4 , and R^5 to be hydrocarbyloxy groups, and it is more preferable for three of R^3 , R^4 , and R^5 to be hydrocarbyloxy groups.

n in formula (II) denotes an integer of 1 to 10. From the viewpoint of enhancing fuel economy it is preferably not less than 3, and from the viewpoint of improving economy it is preferably not more than 4. It is particularly preferably 3.

A in formula (II) is a nitrogen atom-containing functional group, and examples thereof include an amino group, an isocyano group, a cyano group, a pyridyl group, a piperidyl group, a pyrazyl group, and a morpholino group.

A is preferably a group of formula (IIa) below,

wherein R^6 and R^7 independently denote a group having 1 to 6 carbon atoms, which may have at least one type of atom selected from the atomic group consisting of a nitrogen atom, an oxygen atom, and a silicon atom, R^6 and R^7 may be bonded so as to form, together with the nitrogen atom, a ring structure, and R^6 and R^7 may be a single group bonded to the nitrogen via a double bond.

As R^6 and R^7 of formula (IIa), a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a substituted silyl group, etc. can be cited.

Examples of the hydrocarbyl group denoted by R^6 and R^7 include an alkyl group such as a methyl group, an ethyl group, an *n*-propyl group, an isopropyl group, an *n*-butyl group, a *sec*-butyl group, a *tert*-butyl group, an *n*-pentyl group, a neopentyl group, an isopentyl group, or an *n*-hexyl group; a cycloalkyl group such as a cyclohexyl group; and a phenyl group.

As the substituted hydrocarbyl group denoted by R^6 and R^7 there can be cited a substituted hydrocarbyl group having as a substituent at least one type of group selected from the group consisting of a nitrogen atom-containing group, an oxygen atom-containing group, and a silicon atom-containing group. Examples of the group having a nitrogen atom-containing group as a substituent include a dialkylaminoalkyl group such as a dimethylaminoethyl group or a diethylaminoethyl group. Examples of the group having an oxygen atom-containing group as a substituent include an alkoxyalkyl group such as a methoxymethyl group, a methoxyethyl group, an ethoxymethyl group, or an ethoxyethyl group; an alkylene oxide group such as an epoxy group or a tetrahydrofuranyl group; and an alkylene oxide alkyl group such as a glycidyl group or a tetrahydrofurfuryl group. Examples of a group having a silicon atom-containing group as a substituent include a trialkylsilylalkyl group such as a trimethylsilylmethyl group.

In the present specification, an alkylene oxide group denotes a monovalent group formed by removing a hydrogen atom from the ring of a cyclic ether compound. The alkylene oxide alkyl group denotes a group formed by replacing at

least one hydrogen atom of an alkyl group by an alkylene oxide group.

Examples of the substituted silyl group denoted by R^6 and R^7 include a trialkylsilyl group such as a trimethylsilyl group, a triethylsilyl group, or a *t*-butyldimethylsilyl group; and a trialkoxysilyl group such as trimethoxysilyl group.

Examples of the group in which R^6 and R^7 are bonded include a divalent group having 2 to 12 carbon atoms, which may have at least one type of atom selected from the atomic group consisting of a nitrogen atom, an oxygen atom, and a silicon atom. Examples thereof include an alkylene group such as a trimethylene group, a tetramethylene group, a pentamethylene group, or a hexamethylene group; an oxydialkylene group such as an oxydiethylene group or an oxydipropylene group; and a nitrogen-containing group such as a group represented by $-\text{CH}_2\text{CH}_2-\text{NH}-\text{CH}_2-$ or a group represented by $-\text{CH}_2\text{CH}_2-\text{N}=\text{CH}-$.

The group in which R^6 and R^7 are bonded is preferably a nitrogen-containing group, and more preferably a group represented by $-\text{CH}_2\text{CH}_2-\text{NH}-\text{CH}_2-$ or a group represented by $-\text{CH}_2\text{CH}_2-\text{N}=\text{CH}-$.

Examples of the single group denoted by R^6 and R^7 that is bonded to the nitrogen via a double bond include a divalent group having 2 to 12 carbon atoms, which may have at least one type of atom selected from the atomic group consisting of a nitrogen atom, an oxygen atom, and a silicon atom. Examples thereof include an ethylidene group, a 1-methylpropylidene group, a 1,3-dimethylbutylidene group, a 1-methylethylidene group, and a 4-*N,N*-dimethylaminobenzylidene group.

The hydrocarbyl group denoted by R^6 and R^7 is preferably an alkyl group, more preferably an alkyl group having 1 to 4 carbon atoms, yet more preferably a methyl group, an ethyl group, an *n*-propyl group, or an *n*-butyl group, and still more preferably a methyl group or an ethyl group. The substituted hydrocarbyl group denoted by R^6 and R^7 is preferably an alkoxyalkyl group, an alkylene oxide group, or an alkylene oxide alkyl group. The substituted silyl group denoted by R^6 and R^7 is preferably a trialkylsilyl group or a trialkoxysilyl group, more preferably a trialkylsilyl group, and yet more preferably a trimethylsilyl group or a triethylsilyl group.

R^6 and R^7 are preferably a nitrogen-containing group in which R^6 and R^7 are bonded, an alkyl group, an alkoxyalkyl group, an alkylene oxide group, an alkylene oxide alkyl group, or a substituted silyl group, and more preferably an alkyl group, an alkylene oxide group, an alkylene oxide alkyl group, or a trialkylsilyl group.

Examples of the group of formula (IIa) include an acyclic amino group and a cyclic amino group.

Examples of the acyclic amino group include a dialkylamino group such as a dimethylamino group, a diethylamino group, a di(*n*-propyl)amino group, a di(isopropyl)amino group, a di(*n*-butyl)amino group, a di(*sec*-butyl)amino group, a di(*tert*-butyl)amino group, a di(neopentyl)amino group, or an ethylmethylamino group; a di(alkoxyalkyl)amino group such as a di(methoxymethyl)amino group, a di(methoxyethyl)amino group, a di(ethoxymethyl)amino group, or a di(ethoxyethyl)amino group; and a di(trialkylsilyl)amino group such as a di(trimethylsilyl)amino group or a di(*t*-butyldimethylsilyl)amino group. Further examples thereof include a di(alkylene oxide) amino group such as di(epoxy)amino group or a di(tetrahydrofuranyl)amino group; and a di(alkylene oxide alkyl)amino group such as a di(glycidyl)amino group or a di(tetrahydrofurfuryl)amino group. Yet further examples thereof include an ethylideneamino group, a 1-methylpropylideneamino group, a 1,3-dimethylbutylideneamino group, a 1-methylethylideneamino group, and a 4-*N,N*-dimethylaminobenzylideneamino group.

In the present specification, the di(alkylene oxide) amino group denotes an amino group in which two hydrogen atoms bonded to the nitrogen atom are replaced by two alkylene oxide groups, and the di(alkylene oxide alkyl)amino group denotes an amino group in which two hydrogen atoms bonded to the nitrogen atom are replaced by two alkylene oxide alkyl groups.

Examples of the cyclic amino group include a 1-polymethyleneimino group such as a 1-pyrrolidinyl group, a 1-piperidino group, a 1-hexamethyleneimino group, a 1-heptamethyleneimino group, a 1-octamethyleneimino group, a 1-decamethyleneimino group, or a 1-dodecamethyleneimino group. Furthermore,

examples of the cyclic amino group also include a 1-imidazolyl group, a 4,5-dihydro-1-imidazolyl group, a 1-imidazolidinyl group, a 1-piperazinyl group, and a morpholino group.

From the viewpoint of fuel economy, long term stability of a compound, and ready availability, the group of formula (IIa) is preferably an acyclic amino group, and more preferably a dialkylamino group, a di(alkylene oxide) amino group, a di(alkylene oxide alkyl)amino group, or a di(trialkylsilyl)amino group.

Examples of the compound of formula (II) include a compound wherein formula (IIa) is an acyclic amino group such as a dialkylamino group, a di(alkoxyalkyl)amino group, a di(alkylene oxide) amino group, a di(alkylene oxide alkyl)amino group, or a di(alkoxyalkyl)amino group.

Examples of compounds in which formula (IIa) is a dialkylamino group include

[3-(dialkylamino)propyl]trialkoxysilanes such as
[3-(dimethylamino)propyl]trimethoxysilane,
[3-(diethylamino)propyl]trimethoxysilane,
[3-(ethylmethylamino)propyl]trimethoxysilane,
[3-(dimethylamino)propyl]triethoxysilane,
[3-(diethylamino)propyl]triethoxysilane, and
[3-(ethylmethylamino)propyl]triethoxysilane;
[3-(dialkylamino)propyl]alkyldialkoxysilanes such as
[3-(dimethylamino)propyl]methyldimethoxysilane,
[3-(diethylamino)propyl]methyldimethoxysilane,
[3-(ethylmethylamino)propyl]methyldimethoxysilane,
[3-(dimethylamino)propyl]ethyldimethoxysilane,
[3-(diethylamino)propyl]ethyldimethoxysilane,
[3-(ethylmethylamino)propyl]ethyldimethoxysilane,
[3-(dimethylamino)propyl]methyldiethoxysilane,
[3-(diethylamino)propyl]methyldiethoxysilane,

[3-(ethylmethylamino)propyl]methyldiethoxysilane,
 [3-(dimethylamino)propyl]ethyldiethoxysilane,
 [3-(diethylamino)propyl]ethyldiethoxysilane, and
 [3-(ethylmethylamino)propyl]ethyldiethoxysilane; and
 [3-(dialkylamino)propyl]dialkylalkoxysilanes such as
 [3-(dimethylamino)propyl]dimethylmethoxysilane,
 [3-(diethylamino)propyl]dimethylmethoxysilane,
 [3-(dimethylamino)propyl]diethylmethoxysilane,
 [3-(diethylamino)propyl]diethylmethoxysilane,
 [3-(dimethylamino)propyl]dimethylethoxysilane,
 [3-(diethylamino)propyl]dimethylethoxysilane,
 [3-(dimethylamino)propyl]diethylethoxysilane, and
 [3-(diethylamino)propyl]diethylethoxysilane.

Examples of compounds in which formula (IIa) is a di(alkoxyalkyl)amino group include

{3-[di(alkoxyalkyl)amino]propyl}trialkoxysilanes such as
 {3-[di(methoxymethyl)amino]propyl}trimethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}trimethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}trimethoxysilane,
 {3-[di(ethoxyethyl)amino]propyl}trimethoxysilane,
 {3-[di(methoxymethyl)amino]propyl}triethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}triethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}triethoxysilane, and
 {3-[di(ethoxyethyl)amino]propyl}triethoxysilane;
 {3-[di(alkoxyalkyl)amino]propyl}alkyldialkoxysilanes such as
 {3-[di(methoxymethyl)amino]propyl}methyldimethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}methyldimethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}methyldimethoxysilane,
 {3-[di(ethoxyethyl)amino]propyl}methyldimethoxysilane,

{3-[di(methoxymethyl)amino]propyl}ethyl dimethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}ethyl dimethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}ethyl dimethoxysilane,
 {3-[di(ethoxyethyl)amino]propyl}ethyl dimethoxysilane,
 {3-[di(methoxymethyl)amino]propyl}methyl diethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}methyl diethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}methyl diethoxysilane,
 {3-[di(ethoxyethyl)amino]propyl}methyl diethoxysilane,
 {3-[di(methoxymethyl)amino]propyl}ethyl diethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}ethyl diethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}ethyl diethoxysilane, and
 {3-[di(ethoxyethyl)amino]propyl}ethyl diethoxysilane; and
 {3-[di(alkoxyalkyl)amino]propyl}dialkylalkoxysilanes such as
 {3-[di(methoxymethyl)amino]propyl}dimethylmethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}dimethylmethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}dimethylmethoxysilane,
 {3-[di(ethoxyethyl)amino]propyl}dimethylmethoxysilane,
 {3-[di(methoxymethyl)amino]propyl}diethylmethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}diethylmethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}diethylmethoxysilane,
 {3-[di(ethoxyethyl)amino]propyl}diethylmethoxysilane,
 {3-[di(methoxymethyl)amino]propyl}dimethylethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}dimethylethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}dimethylethoxysilane,
 {3-[di(ethoxyethyl)amino]propyl}dimethylethoxysilane,
 {3-[di(methoxymethyl)amino]propyl}diethylethoxysilane,
 {3-[di(ethoxymethyl)amino]propyl}diethylethoxysilane,
 {3-[di(methoxyethyl)amino]propyl}diethylethoxysilane, and
 {3-[di(ethoxyethyl)amino]propyl}diethylethoxysilane.

Examples of compounds in which formula (IIa) is a di(alkylene oxide) amino group include

compounds in which formula (IIa) is a di(epoxy)amino group such as

{3-[di(epoxy)amino]propyl}trimethoxysilane,

{3-[di(epoxy)amino]propyl}triethoxysilane,

{3-[di(epoxy)amino]propyl}methyldimethoxysilane,

{3-[di(epoxy)amino]propyl}ethyldimethoxysilane,

{3-[di(epoxy)amino]propyl}methyldiethoxysilane,

{3-[di(epoxy)amino]propyl}ethyldiethoxysilane,

{3-[di(epoxy)amino]propyl}dimethylmethoxysilane,

{3-[di(epoxy)amino]propyl}diethylmethoxysilane,

{3-[di(epoxy)amino]propyl}dimethylethoxysilane, and

{3-[di(epoxy)amino]propyl}diethylethoxysilane; and

compounds in which formula (IIa) is a di(tetrahydrofuranyl)amino group such as

{3-[di(tetrahydrofuranyl)amino]propyl}trimethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}triethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}methyldimethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}ethyldimethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}methyldiethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}ethyldiethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}dimethylmethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}diethylmethoxysilane,

{3-[di(tetrahydrofuranyl)amino]propyl}dimethylethoxysilane, and

{3-[di(tetrahydrofuranyl)amino]propyl}diethylethoxysilane.

Examples of compounds in which formula (IIa) is a di(alkylene oxide alkyl)amino group include

compounds in which formula (IIa) is a di(glycidyl)amino group such as

{3-[di(glycidyl)amino]propyl}trimethoxysilane,

{3-[di(glycidyl)amino]propyl}triethoxysilane,

{3-[di(glycidyl)amino]propyl}methyldimethoxysilane,
 {3-[di(glycidyl)amino]propyl}ethyldimethoxysilane,
 {3-[di(glycidyl)amino]propyl}methyldiethoxysilane,
 {3-[di(glycidyl)amino]propyl}ethyldiethoxysilane,
 {3-[di(glycidyl)amino]propyl}dimethylmethoxysilane,
 {3-[di(glycidyl)amino]propyl}diethylmethoxysilane,
 {3-[di(glycidyl)amino]propyl}dimethylethoxysilane, and
 {3-[di(glycidyl)amino]propyl}diethylethoxysilane; and
 compounds in which formula (IIa) is a di(tetrahydrofurfuryl)amino group such as
 {3-[di(tetrahydrofurfuryl)amino]propyl}trimethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}triethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}methyldimethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}ethyldimethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}methyldiethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}ethyldiethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}dimethylmethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}diethylmethoxysilane,
 {3-[di(tetrahydrofurfuryl)amino]propyl}dimethylethoxysilane, and
 {3-[di(tetrahydrofurfuryl)amino]propyl}diethylethoxysilane.

Examples of compounds in which formula (IIa) is a trialkylsilyl group include
 {3-[di(trialkylsilyl)amino]propyl}trialkoxysilanes such as
 {3-[di(trimethylsilyl)amino]propyl}trimethoxysilane,
 {3-[di(*t*-butyldimethylsilyl)amino]propyl}trimethoxysilane,
 {3-[di(trimethylsilyl)amino]propyl}triethoxysilane, and
 {3-[di(*t*-butyldimethylsilyl)amino]propyl}triethoxysilane;
 {3-[di(trialkylsilyl)amino]propyl}alkyldialkoxysilanes such as
 {3-[di(trimethylsilyl)amino]propyl}methyldimethoxysilane,
 {3-[di(*t*-butyldimethylsilyl)amino]propyl}methyldimethoxysilane,
 {3-[di(trimethylsilyl)amino]propyl}methyldiethoxysilane, and

{3-[di(*t*-butyldimethylsilyl)amino]propyl}methyldiethoxysilane; and
{3-[di(trialkylsilyl)amino]propyl}dialkylalkoxysilanes such as
{3-[di(trimethylsilyl)amino]propyl}dimethylmethoxysilane,
{3-[di(*t*-butyldimethylsilyl)amino]propyl}dimethylmethoxysilane,
{3-[di(trimethylsilyl)amino]propyl}dimethylethoxysilane, and
{3-[di(*t*-butyldimethylsilyl)amino]propyl}dimethylethoxysilane.

Among them, a [3-(dialkylamino)propyl]trialkoxysilane is preferable, and
[3-(dimethylamino)propyl]trimethoxysilane,
[3-(diethylamino)propyl]trimethoxysilane,
[3-(dimethylamino)propyl]triethoxysilane, and
[3-(diethylamino)propyl]triethoxysilane are more preferable.

Furthermore, examples of the compound of formula (II) include a compound
in which formula (IIa) is a cyclic amino group such as a 1-piperidino group, a 1-
hexamethyleneimino group, a 1-imidazolyl group, a 4,5-dihydro-1-imidazolyl group, a
1-piperaziny group, or a morpholino group.

Examples of compounds in which formula (IIa) is a 1-piperidino group include
3-(1-piperidino)propyltrimethoxysilane,
3-(1-piperidino)propyltriethoxysilane,
3-(1-piperidino)propylmethyldimethoxysilane,
3-(1-piperidino)propylethyldimethoxysilane,
3-(1-piperidino)propylmethyldiethoxysilane, and
3-(1-piperidino)propylethyldiethoxysilane.

Examples of compounds in which formula (IIa) is a 1-hexamethyleneimino
group include
3-(1-hexamethyleneimino)propyltrimethoxysilane,
3-(1-hexamethyleneimino)propyltriethoxysilane,
3-(1-hexamethyleneimino)propylmethyldimethoxysilane,
3-(1-hexamethyleneimino)propylethyldimethoxysilane,
3-(1-hexamethyleneimino)propylmethyldiethoxysilane, and

3-(1-hexamethyleneimino)propylethyldiethoxysilane.

Examples of compounds in which formula (IIa) is a 1-imidazolyl group include *N*-(3-trimethoxysilylpropyl)imidazole, and *N*-(3-triethoxysilylpropyl)imidazole.

Examples of compounds in which formula (IIa) is a 4,5-dihydro-1-imidazolyl group include *N*-(3-trimethoxysilylpropyl)-4,5-dihydroimidazole, and *N*-(3-triethoxysilylpropyl)-4,5-dihydroimidazole.

Examples of compounds in which formula (IIa) is a 1-piperaziny group include

3-(1-piperaziny)propyltrimethoxysilane,
3-(1-piperaziny)propyltriethoxysilane,
3-(1-piperaziny)propylmethyldimethoxysilane,
3-(1-piperaziny)propylethyldimethoxysilane,
3-(1-piperaziny)propylmethyldiethoxysilane, and
3-(1-piperaziny)propylethyldiethoxysilane.

Examples of compounds in which formula (IIa) is a morpholino group include 3-morpholinopropyltrimethoxysilane,
3-morpholinopropyltriethoxysilane,
3-morpholinopropylmethyldimethoxysilane,
3-morpholinopropylethyldimethoxysilane,
3-morpholinopropylmethyldiethoxysilane, and
3-morpholinopropylethyldiethoxysilane.

Among them, a compound in which formula (IIa) is a 1-imidazolyl group and a compound in which formula (IIa) is a 4,5-dihydro-1-imidazolyl group are preferable, and

N-(3-trimethoxysilylpropyl)imidazole,
N-(3-triethoxysilylpropyl)imidazole,
N-(3-trimethoxysilylpropyl)-4,5-dihydroimidazole, and

N-(3-triethoxysilylpropyl)-4,5-dihydroimidazole are more preferable.

The conjugated diene polymer of the present invention may further comprise, in addition to the conjugated diene-based constituent unit (conjugated diene unit), a constituent unit based on another monomer. Examples of said other monomer include an aromatic vinyl, a vinyl nitrile, and an unsaturated carboxylic acid ester. Examples of the aromatic vinyl include styrene, α -methylstyrene, vinyltoluene, vinyl naphthalene, divinylbenzene, trivinylbenzene, and divinyl naphthalene. Examples of the vinyl nitrile include acrylonitrile, and examples of the unsaturated carboxylic acid ester include methyl acrylate, ethyl acrylate, methyl methacrylate, and ethyl methacrylate. Among them, an aromatic vinyl is preferable, and styrene is more preferable.

From the viewpoint of strength the conjugated diene polymer of the present invention preferably contains an aromatic vinyl-based constituent unit (aromatic vinyl unit), and the content of the aromatic vinyl unit, relative to 100 % by weight of the total amount of the conjugated diene unit and the aromatic vinyl unit, is preferably not less than 10 % by weight (the content of the conjugated diene unit being not more than 90 % by weight), and more preferably not less than 15 % by weight (the content of the conjugated diene unit being not more than 85 % by weight). Furthermore, from the viewpoint of fuel economy, the content of the aromatic vinyl unit is preferably not more than 50 % by weight (the content of the conjugated diene unit being not less than 50 % by weight), and more preferably not more than 45 % by weight (the content of the conjugated diene unit being not less than 55 % by weight).

From the viewpoint of strength, the Mooney viscosity (ML_{1+4}) of the conjugated diene polymer of the present invention is preferably not less than 10, and more preferably not less than 20. Furthermore, from the viewpoint of processability, it is preferably not more than 200, and more preferably not more than 150. The Mooney viscosity (ML_{1+4}) is measured at 100°C in accordance with JIS K6300 (1994).

From the viewpoint of fuel economy, the vinyl bond content of the conjugated

diene polymer of the present invention is preferably not more than 80 mole %, and more preferably not more than 70 mole % per 100 mole % of the conjugated diene-based constituent unit. Furthermore, from the viewpoint of grip properties, it is preferably not less than 10 mole %, more preferably not less than 15 mole %, yet more preferably not less than 20 mole %, and particularly preferably not less than 40 mole %. The vinyl bond content is typically measured by IR spectroscopy from the absorption intensity at around 910 cm^{-1} , which is an absorption peak of a vinyl group.

From the viewpoint of fuel economy, the molecular weight distribution of the conjugated diene polymer of the present invention is preferably 1 to 5, and more preferably 1 to 2. The molecular weight distribution is obtained by measuring number-average molecular weight (M_n) and weight-average molecular weight (M_w) by a gel permeation chromatograph (GPC) method, and dividing M_w by M_n .

A preferred method for producing the conjugated diene polymer of the present invention is a production method comprising steps A and B:

step A: polymerizing monomers containing a conjugated diene and a vinyl compound of formula (III) below in a hydrocarbon solvent in the presence of an alkali metal catalyst to produce a polymer having an alkali metal originating from the catalyst at at least one terminus of a polymer chain having a conjugated diene-based monomer unit and a monomer unit based on the vinyl compound of formula (III):

wherein X^4 , X^5 , and X^6 independently denote a group of formula (IIIa) below, a hydrocarbyl group, or a substituted hydrocarbyl group, and at least one of X^4 , X^5 , and X^6 is a group of formula (IIIa) below,

wherein R^8 and R^9 independently denote a hydrocarbyl group having 1 to 6

carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl group, or a substituted silyl group, and R^8 and R^9 may be bonded so as to form, together with the nitrogen atom, a ring structure, and

step B: reacting the resulting polymer in step A with a compound of formula (II):

wherein n denotes an integer of 1 to 10, R^3 , R^4 , and R^5 independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1 to 4 carbon atoms, at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group, and A denotes a nitrogen atom-containing functional group.

Examples of the alkali metal catalyst that may be used in (step A) include an alkali metal, an organoalkali metal compound, a complex between an alkali metal and a polar compound, an oligomer having an alkali metal, etc. Examples of the alkali metal include lithium, sodium, potassium, rubidium, and cesium. Examples of the organoalkali metal compound include ethyllithium, *n*-propyllithium, *iso*-propyllithium, *n*-butyllithium, *sec*-butyllithium, *t*-octyllithium, *n*-decyllithium, phenyllithium, 2-naphthyllithium, 2-butylphenyllithium, 4-phenylbutyllithium, cyclohexyllithium, 4-cyclopentyllithium, dimethylaminopropyllithium, diethylaminopropyllithium, *t*-butyldimethylsilyloxypropyllithium, *N*-morpholinopropyllithium, lithium hexamethyleneimide, lithium pyrrolidide, lithium piperidide, lithium heptamethyleneimide, lithium dodecamethyleneimide, 1,4-dilithio-2-butene, sodium naphthalenide, sodium biphenylide, and potassium naphthalenide. Examples of the complex between an alkali metal and a polar compound include a potassium-tetrahydrofuran complex and a potassium-diethoxyethane complex, and examples of the oligomer having an alkali metal include the sodium salt of α -methylstyrene tetramer. Among them, an organolithium compound or an organosodium compound is preferable, and an organolithium compound or

organosodium compound having 2 to 20 carbon atoms is more preferable.

The hydrocarbon solvent used in step A is a solvent that does not deactivate the organoalkali metal compound catalyst, and examples thereof include an aliphatic hydrocarbon, an aromatic hydrocarbon, and an alicyclic hydrocarbon. Specific examples of the aliphatic hydrocarbon include propane, *n*-butane, *iso*-butane, *n*-pentane, *iso*-pentane, *n*-hexane, propene, 1-butene, *iso*-butene, *trans*-2-butene, *cis*-2-butene, 1-pentene, 2-pentene, 1-hexene, and 2-hexene. Specific examples of the aromatic hydrocarbon include benzene, toluene, xylene, and ethylbenzene, and specific examples of the alicyclic hydrocarbon include cyclopentane and cyclohexane. They may be used on their own or in a combination of two or more types. Among them, a hydrocarbon having 2 to 12 carbon atoms is preferable.

In step A, monomers containing a conjugated diene and a vinyl compound of formula (III) are polymerized to produce a conjugated diene polymer having at a polymer chain terminus an alkali metal originating from the above-mentioned alkali metal catalyst. Examples of the conjugated diene include 1,3-butadiene, isoprene, 1,3-pentadiene, 2,3-dimethyl-1,3-butadiene, and 1,3-hexadiene, and they may be used on their own or in a combination of two or more types. Among them, from the viewpoint of ready availability, 1,3-butadiene and isoprene are preferable.

X^4 , X^5 , and X^6 in formula (III) independently denote a group of formula (IIIa), a hydrocarbyl group, or a substituted hydrocarbyl group, and at least one of X^4 , X^5 , and X^6 is a group of formula (IIIa).

R^8 and R^9 in formula (IIIa) independently denote a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl group, or a substituted silyl group, and R^8 and R^9 may be bonded so as to form, together with the nitrogen atom, a ring structure.

Examples of the hydrocarbyl group having 1 to 6 carbon atoms denoted by R^8 and R^9 include an alkyl group such as a methyl group, an ethyl group, a *n*-propyl group, an isopropyl group, an *n*-butyl group, a *sec*-butyl group, a *tert*-butyl group, an *n*-pentyl group, a neopentyl group, an isopentyl group, or an *n*-hexyl group; a

cycloalkyl group such as a cyclohexyl group; and a phenyl group.

As the substituted hydrocarbyl group having 1 to 6 carbon atoms denoted by R^8 and R^9 there can be cited a substituted hydrocarbyl group having as a substituent at least one type of group selected from the group consisting of a nitrogen atom-containing group, an oxygen atom-containing group, a silicon atom-containing group, etc. Examples of a group having a nitrogen atom-containing group as a substituent include a dialkylaminoalkyl group such as a dimethylaminoethyl group or a diethylaminoethyl group, examples of a group having an oxygen atom-containing group as a substituent include an alkoxyalkyl group such as a methoxymethyl group, a methoxyethyl group, an ethoxymethyl group, or an ethoxyethyl group, and examples of a group having a silicon atom-containing group as a substituent include a trialkylsilylalkyl group such as a trimethylsilylmethyl group.

Examples of the substituted silyl group denoted by R^8 and R^9 include a trialkylsilyl group such as a trimethylsilyl group, a triethylsilyl group, or a *t*-butyldimethylsilyl group.

As a group in which R^8 and R^9 are bonded, there can be cited a divalent group having 1 to 12 carbon atoms, which may have at least one type of atom selected from the atomic group consisting of a nitrogen atom, an oxygen atom, and a silicon atom. Examples thereof include an alkylene group such as a trimethylene group, a tetramethylene group, a pentamethylene group, or a hexamethylene group; an oxydialkylene group such as an oxydiethylene group or an oxydipropylene group; and a nitrogen-containing group such as a group represented by $-\text{CH}_2\text{CH}_2\text{-NH-CH}_2-$ or a group represented by $-\text{CH}_2\text{CH}_2\text{-N=CH-}$.

The group in which R^8 and R^9 are bonded is preferably a nitrogen-containing group, and more preferably a group represented by $-\text{CH}_2\text{CH}_2\text{-NH-CH}_2-$ or a group represented by $-\text{CH}_2\text{CH}_2\text{-N=CH-}$.

The hydrocarbyl group denoted by R^8 and R^9 is preferably an alkyl group, more preferably an alkyl group having 1 to 4 carbon atoms, yet more preferably a methyl group, an ethyl group, an *n*-propyl group, or an *n*-butyl group, and particularly

preferably an ethyl group or an *n*-butyl group. The substituted hydrocarbyl group denoted by R^8 and R^9 is preferably an alkoxyalkyl group, and more preferably an alkoxyalkyl group having 1 to 4 carbon atoms. The substituted silyl group denoted by R^8 and R^9 is preferably a trialkylsilyl group, and more preferably a trimethylsilyl group.

R^8 and R^9 are preferably an alkyl group, an alkoxyalkyl group, a substituted silyl group, or a nitrogen-containing group in which R^8 and R^9 are bonded, more preferably an alkyl group, yet more preferably an alkyl group having 1 to 4 carbon atoms, and still more preferably a methyl group, an ethyl group, an *n*-propyl group, or an *n*-butyl group.

As the group of formula (IIIa), an acyclic amino group and a cyclic amino group can be cited.

Examples of the acyclic amino group include a dialkylamino group such as a dimethylamino group, a diethylamino group, a di(*n*-propyl)amino group, a di(isopropyl)amino group, a di(*n*-butyl)amino group, a di(*sec*-butyl)amino group, a di(*tert*-butyl)amino group, a di(neopentyl)amino group, or an ethylmethylamino group; a di(alkoxyalkyl)amino group such as a di(methoxymethyl)amino group, a di(methoxyethyl)amino group, a di(ethoxymethyl)amino group, or a di(ethoxyethyl)amino group; and a di(trialkylsilyl)amino group such as a di(trimethylsilyl)amino group or a di(*t*-butyldimethylsilyl)amino group.

Examples of the cyclic amino group include a 1-polymethyleneimino group such as a 1-pyrrolidinyl group, a 1-piperidino group, a 1-hexamethyleneimino group, a 1-heptamethyleneimino group, a 1-octamethyleneimino group, a 1-decamethyleneimino group, or a 1-dodecamethyleneimino group. Further examples of the cyclic amino group include a 1-imidazolyl group, a 4,5-dihydro-1-imidazolyl group, a 1-imidazolidinyl group, a 1-piperazinyl group, and a morpholino group.

From the viewpoint of economy and ready availability, the group of formula (IIIa) is preferably an acyclic amino group, more preferably a dialkylamino group, yet more preferably a dialkylamino group substituted with an alkyl group having 1 to 4

carbon atoms, and still more preferably a dimethylamino group, a diethylamino group, a di(*n*-propyl)amino group, or a di(*n*-butyl)amino group.

Examples of the hydrocarbyl group denoted by X^4 to X^6 of formula (III) include an alkyl group such as a methyl group, an ethyl group, an *n*-propyl group, an isopropyl group, an *n*-butyl group, a *sec*-butyl group, or a *tert*-butyl group. Furthermore, examples of the substituted hydrocarbyl group include an alkoxyalkyl group such as a methoxymethyl group, an ethoxymethyl group, a methoxyethyl group, or an ethoxyethyl group.

The hydrocarbyl group denoted by X^4 to X^6 is preferably an alkyl group, more preferably an alkyl group having 1 to 4 carbon atoms, and yet more preferably a methyl group or an ethyl group. The substituted hydrocarbyl group denoted by X^4 to X^6 is preferably an alkoxyalkyl group, and more preferably an alkoxyalkyl group having 1 to 4 carbon atoms.

The hydrocarbyl group or substituted hydrocarbyl group denoted by X^4 to X^6 is preferably an alkyl group or an alkoxyalkyl group, more preferably an alkyl group having 1 to 4 carbon atoms or an alkoxyalkyl group having 1 to 4 carbon atoms, yet more preferably an alkyl group having 1 to 4 carbon atoms, and still more preferably a methyl group or an ethyl group.

At least one of X^4 , X^5 , and X^6 of formula (III) is a group of formula (IIIa). It is preferable that two or more of X^4 , X^5 , and X^6 are groups of formula (IIIa), and it is more preferable that two of X^4 , X^5 , and X^6 are groups of formula (IIIa).

With regard to the vinyl compound of formula (III) used in step A, as compounds in which one of X^4 to X^6 is an acyclic amino group of formula (IIIa) and two thereof are a hydrocarbyl group or a substituted hydrocarbyl group there can be cited a (dialkylamino)dialkylvinylsilane, a {di(trialkylsilyl)amino}dialkylvinylsilane, and a (dialkylamino)dialkoxyalkylvinylsilane.

Examples of the (dialkylamino)dialkylvinylsilane include (dimethylamino)dimethylvinylsilane, (ethylmethylamino)dimethylvinylsilane, (diethylamino)dimethylvinylsilane, (ethyl-*n*-propylamino)dimethylvinylsilane,

(ethylisopropylamino)dimethylvinylsilane, (di(*n*-propyl)amino)dimethylvinylsilane,
 (diisopropylamino)dimethylvinylsilane, (*n*-butyl-*n*-propylamino)dimethylvinylsilane,
 (di(*n*-butyl)amino)dimethylvinylsilane, (dimethylamino)diethylvinylsilane,
 (ethylmethylamino)diethylvinylsilane, (diethylamino)diethylvinylsilane, (ethyl-*n*-
 propylamino)diethylvinylsilane, (ethylisopropylamino)diethylvinylsilane, (di(*n*-
 propyl)amino)diethylvinylsilane, (diisopropylamino)diethylvinylsilane, (*n*-butyl-*n*-
 propylamino)diethylvinylsilane, (di(*n*-butyl)amino)diethylvinylsilane,
 (dimethylamino)dipropylvinylsilane, (ethylmethylamino)dipropylvinylsilane,
 (diethylamino)dipropylvinylsilane, (ethyl-*n*-propylamino)dipropylvinylsilane,
 (ethylisopropylamino)dipropylvinylsilane, (di(*n*-propyl)amino)dipropylvinylsilane,
 (diisopropylamino)dipropylvinylsilane, (*n*-butyl-*n*-propylamino)dipropylvinylsilane,
 (di(*n*-butyl)amino)dipropylvinylsilane, (dimethylamino)dibutylvinylsilane,
 (ethylmethylamino)dibutylvinylsilane, (diethylamino)dibutylvinylsilane, (ethyl-*n*-
 propylamino)dibutylvinylsilane, (ethylisopropylamino)dibutylvinylsilane, (di(*n*-
 propyl)amino)dibutylvinylsilane, (diisopropylamino)dibutylvinylsilane, (*n*-butyl-*n*-
 propylamino)dibutylvinylsilane, and (di(*n*-butyl)amino)dibutylvinylsilane.

Examples of the {di(trialkylsilyl)amino}dialkylvinylsilane include
 {di(trimethylsilyl)amino}dimethylvinylsilane, {di(*t*-
 butyldimethylsilyl)amino}dimethylvinylsilane,
 {di(trimethylsilyl)amino}diethylvinylsilane, and {di(*t*-
 butyldimethylsilyl)amino}diethylvinylsilane.

Examples of the (dialkylamino)dialkoxyalkylvinylsilane include
 (dimethylamino)dimethoxymethylvinylsilane,
 (dimethylamino)dimethoxyethylvinylsilane, (dimethylamino)diethoxymethylvinylsilane,
 (dimethylamino)diethoxyethylvinylsilane, (diethylamino)dimethoxymethylvinylsilane,
 (diethylamino)dimethoxyethylvinylsilane, (diethylamino)diethoxymethylvinylsilane,
 and (diethylamino)diethoxyethylvinylsilane.

Examples of the compound in which two of X⁴ to X⁶ are acyclic amino groups
 of formula (IIIa) and one thereof is a hydrocarbyl group or a substituted hydrocarbyl

group include a bis(dialkylamino)alkylvinylsilane, a bis{di(trialkylsilyl)amino}alkylvinylsilane, a bis(dialkylamino)alkoxyalkylvinylsilane, etc.

Examples of the bis(dialkylamino)alkylvinylsilane include bis(dimethylamino)methylvinylsilane, bis(ethylmethylamino)methylvinylsilane, bis(diethylamino)methylvinylsilane, bis(ethyl-*n*-propylamino)methylvinylsilane, bis(ethylisopropylamino)methylvinylsilane, bis(di(*n*-propyl)amino)methylvinylsilane, bis(diisopropylamino)methylvinylsilane, bis(*n*-butyl-*n*-propylamino)methylvinylsilane, bis(di(*n*-butyl)amino)methylvinylsilane, bis(dimethylamino)ethylvinylsilane, bis(ethylmethylamino)ethylvinylsilane, bis(diethylamino)ethylvinylsilane, bis(ethyl-*n*-propylamino)ethylvinylsilane, bis(ethylisopropylamino)ethylvinylsilane, bis(di(*n*-propyl)amino)ethylvinylsilane, bis(diisopropylamino)ethylvinylsilane, bis(*n*-butyl-*n*-propylamino)ethylvinylsilane, bis(di(*n*-butyl)amino)ethylvinylsilane, bis(dimethylamino)propylvinylsilane, bis(ethylmethylamino)propylvinylsilane, bis(diethylamino)propylvinylsilane, bis(ethyl-*n*-propylamino)propylvinylsilane, bis(ethylisopropylamino)propylvinylsilane, bis(di(*n*-propyl)amino)propylvinylsilane, bis(diisopropylamino)propylvinylsilane, bis(*n*-butyl-*n*-propylamino)propylvinylsilane, bis(di(*n*-butyl)amino)propylvinylsilane, bis(dimethylamino)butylvinylsilane, bis(ethylmethylamino)butylvinylsilane, bis(diethylamino)butylvinylsilane, bis(ethyl-*n*-propylamino)butylvinylsilane, bis(ethylisopropylamino)butylvinylsilane, bis(di(*n*-propyl)amino)butylvinylsilane, bis(diisopropylamino)butylvinylsilane, bis(*n*-butyl-*n*-propylamino)butylvinylsilane, and bis(di(*n*-butyl)amino)butylvinylsilane.

Examples of the bis{di(trialkylsilyl)amino}alkylvinylsilane include bis{di(trimethylsilyl)amino}methylvinylsilane, bis{di(*t*-butyldimethylsilyl)amino}methylvinylsilane, bis{di(trimethylsilyl)amino}ethylvinylsilane, and bis{di(*t*-butyldimethylsilyl)amino}ethylvinylsilane.

Examples of the bis(dialkylamino)alkoxyalkylvinylsilane include bis(dimethylamino)methoxymethylvinylsilane,

bis(dimethylamino)methoxyethylvinylsilane,
 bis(dimethylamino)ethoxymethylvinylsilane, bis(dimethylamino)ethoxyethylvinylsilane,
 bis(diethylamino)methoxymethylvinylsilane, bis(diethylamino)methoxyethylvinylsilane,
 bis(diethylamino)ethoxymethylvinylsilane, and
 bis(diethylamino)ethoxyethylvinylsilane.

Examples of the compounds in which three of X^4 to X^6 are acyclic amino groups of formula (IIIa) include a tri(dialkylamino)vinylsilane, etc.

Examples thereof include tri(dimethylamino)vinylsilane,
 tri(ethylmethylamino)vinylsilane, tri(diethylamino)vinylsilane,
 tri(ethylpropylamino)vinylsilane, tri(dipropylamino)vinylsilane, and
 tri(butylpropylamino)vinylsilane.

Examples of compounds in which two of X^4 to X^6 are cyclic amino groups of formula (IIIa) and one thereof is a hydrocarbonyl group or a substituted hydrocarbonyl group include bis(morpholino)methylvinylsilane, bis(piperidino)methylvinylsilane,
 bis(4,5-dihydroimidazolyl)methylvinylsilane, and
 bis(hexamethyleneimino)methylvinylsilane.

The vinyl compound of formula (III) in which two of X^4 , X^5 , and X^6 are groups of formula (IIIa) is preferably a vinyl compound in which two of X^4 , X^5 , and X^6 are acyclic amino groups; from the viewpoint of fuel economy and grip properties it is more preferably a bis(dialkylamino)alkylvinylsilane, and yet more preferably bis(dimethylamino)methylvinylsilane, bis(diethylamino)methylvinylsilane, bis(di(*n*-propyl)amino)methylvinylsilane, or bis(di(*n*-butyl)amino)methylvinylsilane. Among them, from the viewpoint of availability of the compound, bis(diethylamino)methylvinylsilane or bis(di(*n*-butyl)amino)methylvinylsilane is preferable.

In step A, the amount of vinyl compound of formula (III) added, relative to the total amount (number of g) of conjugated diene monomer, is preferably not less than 0.001 mmol/g (polymer) and not more than 0.1 mmol/g (polymer), more preferably not less than 0.002 mmol/g (polymer) and not more than 0.07 mmol/g (polymer), and

yet more preferably not less than 0.003 mmol/g (polymer) and not more than 0.05 mmol/g (polymer).

In step A, polymerization may be carried out using the conjugated diene and a vinyl compound of formula (III) in a combination with another monomer. Examples of said other monomer include an aromatic vinyl, a vinyl nitrile, and an unsaturated carboxylic acid ester. Specific examples of the aromatic vinyl include styrene, α -methylstyrene, vinyltoluene, vinyl naphthalene, divinylbenzene, trivinylbenzene, and divinyl naphthalene. Specific examples of the vinyl nitrile include acrylonitrile, and specific examples of the unsaturated carboxylic acid ester include methyl acrylate, ethyl acrylate, methyl methacrylate, and ethyl methacrylate. Among them, an aromatic vinyl is preferable, and styrene is more preferable.

The polymerization in step A may be carried out in the presence of an agent for regulating the vinyl bond content of the conjugated diene unit, an agent for regulating the distribution in the conjugated diene polymer chain of the conjugated diene unit and a constituent unit based on a monomer other than the conjugated diene (hereafter, generally called 'regulators'), etc. Examples of such agents include an ether compound, a tertiary amine, and a phosphine compound. Specific examples of the ether compound include cyclic ethers such as tetrahydrofuran, tetrahydropyran, and 1,4-dioxane; aliphatic monoethers such as diethyl ether and dibutyl ether; aliphatic diethers such as ethylene glycol dimethyl ether, ethylene glycol diethyl ether, ethylene glycol dibutyl ether, diethylene glycol diethyl ether, and diethylene glycol dibutyl ether; and aromatic ethers such as diphenyl ether and anisole. Specific examples of the tertiary amine include triethylamine, tripropylamine, tributylamine, *N,N,N',N'*-tetramethylethylenediamine, *N,N*-diethylaniline, pyridine, and quinoline. Specific examples of the phosphine compound include trimethylphosphine, triethylphosphine, and triphenylphosphine. They may be used on their own or in a combination of two or more types.

The polymerization temperature in step A is usually 25°C to 100°C, preferably 35°C to 90°C, and yet more preferably 50°C to 80°C. The polymerization

time is usually 10 minutes to 5 hours.

In step B, the amount of compound of formula (II) that is contacted with the polymer prepared in step A is usually 0.1 to 3 mol per mol of the alkali metal originating from the organoalkali metal catalyst, preferably 0.5 to 2 mol, and more preferably 0.7 to 1.5 mol.

In step B, the temperature at which the polymer prepared in step A and the compound of formula (II) are contacted is usually 25°C to 100°C, preferably 35°C to 90°C, and yet more preferably 50°C to 80°C. The contact time is usually 60 sec to 5 hours, and preferably 15 min to 1 hour.

In the production method of the present invention, a coupling agent may be added to the hydrocarbon solution of the conjugated diene polymer as necessary from initiation of polymerization of monomer by an alkali metal catalyst to termination of polymerization. Examples of the coupling agent include a compound of formula (IV) below,

wherein R^{10} denotes an alkyl group, an alkenyl group, a cycloalkenyl group, or an aromatic residue, M denotes a silicon atom or a tin atom, L denotes a halogen atom or a hydrocarbyloxy group, and a denotes an integer of 0 to 2.

Here, the aromatic residue denotes a monovalent group in which a hydrogen bonded to an aromatic ring is removed from an aromatic hydrocarbon.

Examples of the coupling agent of formula (IV) include silicon tetrachloride, methyltrichlorosilane, dimethyldichlorosilane, trimethylchlorosilane, tin tetrachloride, methyltrichlorotin, dimethyldichlorotin, trimethylchlorotin, tetramethoxysilane, methyltrimethoxysilane, dimethoxydimethylsilane, methyltriethoxysilane, ethyltrimethoxysilane, dimethoxydiethylsilane, diethoxydimethylsilane, tetraethoxysilane, ethyltriethoxysilane, and diethoxydiethylsilane.

From the viewpoint of processability of the conjugated diene polymer, the amount of coupling agent added is preferably not less than 0.03 mol per mol of the alkali metal originating from the alkali metal catalyst, and more preferably not less

than 0.05 mol. Furthermore, from the viewpoint of fuel economy, it is preferably not more than 0.4 mol, and more preferably not more than 0.3 mol.

The conjugated diene polymer may be recovered from the hydrocarbon solution of the conjugated diene polymer by a known recovery method such as, for example, (1) a method in which a coagulant is added to the hydrocarbon solution of the conjugated diene polymer or (2) a method in which steam is added to the hydrocarbon solution of the conjugated diene polymer. The conjugated diene polymer thus recovered may be dried by a known dryer such as a band dryer or an extrusion dryer.

Furthermore, in the method for producing a conjugated diene polymer of the present invention, a treatment in which a group of formula (Ia) of a polymer is replaced by a hydroxy group by hydrolysis, etc. may be carried out. This treatment may be carried out in a state in which the polymer is on its own or is in a compositional state, as described later.

The conjugated diene polymer of the present invention may be used in a conjugated diene polymer composition by combining another polymer component, an additive, etc. therewith.

Examples of said other polymer component include conventional styrene-butadiene copolymer rubber, polybutadiene rubber, butadiene-isoprene copolymer rubber, and butyl rubber. Examples further include natural rubber, an ethylene-propylene copolymer, and an ethylene-octene copolymer. These polymer components may be used in a combination of two or more types.

In the case where another polymer component is combined with the conjugated diene polymer of the present invention, from the viewpoint of fuel economy, the amount of conjugated diene polymer of the present invention is preferably not less than 10 parts by weight, and more preferably not less than 20 parts by weight per 100 parts by weight of the total amount of polymer components combined (including the amount of conjugated diene polymer combined).

As the additive, a known additive may be used, and examples thereof include

a vulcanizing agent such as sulfur; a vulcanization accelerator such as a thiazole-based vulcanization accelerator, a thiuram-based vulcanization accelerator, a sulfenamide-based vulcanization accelerator, or a guanidine-based vulcanization accelerator; a vulcanization activator such as stearic acid or zinc oxide; an organic peroxide; a filler such as silica, carbon black, calcium carbonate, talc, alumina, clay, aluminum hydroxide, or mica; a silane coupling agent; an extender oil; a processing aid; an antioxidant; and a lubricant.

Examples of the silica include dry silica (anhydrous silicic acid), wet silica (hydrated silicic acid), colloidal silica, precipitated silica, calcium silicate, and aluminum silicate. One type thereof may be used on its own, or two or more types thereof may be used in combination. The BET specific surface area of the silica is usually 50 to 250 m²/g. The BET specific surface area is measured in accordance with ASTM D1993-03. As a commercial product, product names VN3, AQ, ER, and RS-150 manufactured by Tosoh Silica Corporation, product names Zeosil 1115MP and 1165MP manufactured by Rhodia, etc. may be used.

Examples of the carbon black include furnace black, acetylene black, thermal black, channel black, and graphite. With regard to the carbon black, channel carbon black such as EPC, MPC, or CC; furnace carbon black such as SAF, ISAF, HAF, MAF, FEF, SRF, GPF, APF, FF, CF, SCF, or ECF; thermal carbon black such as FT or MT; and acetylene carbon black can be cited as examples. One type thereof may be used or two or more types thereof may be used in combination.

The nitrogen adsorption specific surface area (N₂SA) of the carbon black is usually 5 to 200 m²/g, and the dibutyl phthalate (DBP) absorption of the carbon black is usually 5 to 300 mL/100g. The nitrogen adsorption specific surface area is measured in accordance with ASTM D4820-93, and the DBP absorption is measured in accordance with ASTM D2414-93. As a commercial product, product names SEAST 6, SEAST 7HM, and SEAST KH manufactured by Tokai Carbon Co., Ltd., product names CK 3 and Special Black 4A manufactured by Degussa, Inc., etc. may be used.

Examples of the silane coupling agent include vinyltrichlorosilane, vinyltriethoxysilane, vinyltris(β -methoxyethoxy)silane, β -(3,4-epoxycyclohexyl)ethyltrimethoxysilane, γ -glycidoxypropyltrimethoxysilane, γ -methacryloxypropyltrimethoxysilane, *N*-(β -aminoethyl)- γ -aminopropyltrimethoxysilane, *N*-(β -aminoethyl)- γ -aminopropylmethyldimethoxysilane, *N*-phenyl- γ -aminopropyltrimethoxysilane, γ -chloropropyltrimethoxysilane, γ -mercaptopropyltrimethoxysilane, γ -aminopropyltriethoxysilane, bis(3-(triethoxysilyl)propyl) disulfide, bis(3-(triethoxysilyl)propyl) tetrasulfide, γ -trimethoxysilylpropyldimethylthiocarbamyl tetrasulfide, and γ -trimethoxysilylpropylbenzothiazyl tetrasulfide. One type thereof may be used or two or more types thereof may be used in combination. As a commercial product, product names Si69 and Si75 manufactured by Degussa, Inc., etc. may be used.

Examples of the extender oil include an aromatic mineral oil (viscosity-gravity constant (V.G.C. value) 0.900 to 1.049), a naphthenic mineral oil (V.G.C. value 0.850 to 0.899), and a paraffinic mineral oil (V.G.C. value 0.790 to 0.849). The polycyclic aromatic content of the extender oil is preferably less than 3 % by weight, and more preferably less than 1 % by weight. The polycyclic aromatic content is measured in accordance with British Institute of Petroleum method 346/92. Furthermore, the aromatic compound content (CA) of the extender oil is preferably not less than 20 % by weight. Two or more types of extender oils may be used in combination.

Examples of the vulcanization accelerator include thiazole-based vulcanization accelerators such as 2-mercaptobenzothiazole, dibenzothiazyl disulfide, and *N*-cyclohexyl-2-benzothiazylsulfenamide; thiuram-based vulcanization accelerators such as tetramethylthiuram monosulfide and tetramethylthiuram disulfide; sulfenamide-based vulcanization accelerators such as *N*-cyclohexyl-2-benzothiazolesulfenamide, *N*-*t*-butyl-2-benzothiazolesulfenamide, *N*-oxyethylene-2-benzothiazolesulfenamide, *N*-oxyethylene-2-benzothiazolesulfenamide, and *N,N'*-diisopropyl-2-benzothiazolesulfenamide; and guanidine-based vulcanization accelerators such as diphenylguanidine, diorthotolylguanidine and

orthotolylbiguanidine. The amount thereof used is preferably 0.1 to 5 parts by weight relative to 100 parts by weight of rubber component, and more preferably 0.2 to 3 parts by weight.

When a conjugated diene polymer composition is formed by combining a filler with the conjugated diene polymer of the present invention, the amount of filler combined, relative to 100 parts by weight of the conjugated diene polymer of the present invention combined, is usually 10 to 150 parts by weight. From the viewpoint of abrasion resistance and strength, the amount combined is preferably not less than 20 parts by weight, and more preferably not less than 30 parts by weight. From the viewpoint of reinforcement being enhanced, it is preferably not more than 120 parts by weight, and more preferably not more than 100 parts by weight.

When a conjugated diene polymer composition in which a filler is combined with the conjugated diene polymer of the present invention is used, from the viewpoint of fuel economy, it is preferable to use silica as a filler. The amount of silica combined is preferably not less than 50 parts by weight relative to 100 parts by weight of the total amount of fillers combined, and more preferably not less than 70 parts by weight.

As a method for producing a conjugated diene polymer composition by combining another polymer component, an additive, etc. with the conjugated diene polymer of the present invention, a known method such as, for example, a method in which the components are kneaded by means of a known mixer such as a roll or Banbury mixer can be used.

With regard to kneading conditions, when an additive other than a vulcanizing agent or a vulcanization accelerator is combined, the kneading temperature is usually 50°C to 200°C and preferably 80°C to 190°C, and the kneading time is usually 30 sec to 30 min and preferably 1 min to 30 min. When a vulcanizing agent or a vulcanization accelerator is combined, the kneading temperature is usually not more than 100°C, and preferably room temperature to 80°C. A composition in which a vulcanizing agent or a vulcanization accelerator is

combined is usually used after carrying out a vulcanization treatment such as press vulcanization. The vulcanization temperature is usually 120°C to 200°C, and preferably 140°C to 180°C.

The conjugated diene polymer and the conjugated diene polymer composition of the present invention have excellent fuel economy. The grip properties are also good.

The conjugated diene polymer and the conjugated diene polymer composition of the present invention are used for tires, shoe soles, flooring materials, vibration-proofing materials, etc., and are particularly suitably used for tires.

EXAMPLES

The present invention is explained below by reference to Examples.

Physical properties were evaluated by the following methods.

1. Mooney viscosity (ML_{1+4})

The Mooney viscosity of a polymer was measured at 100°C in accordance with JIS K6300 (1994).

2. Vinyl content (units: mole %, proportion of conjugated diene-based 1,2-addition constituent unit)

The vinyl content of a polymer was determined by IR spectroscopy from the absorption intensity at around 910 cm^{-1} , which is an absorption peak of a vinyl group.

3. Styrene unit content (units: % by weight)

The styrene unit content of a polymer was determined from refractive index in accordance with JIS K6383 (1995).

4. Molecular weight distribution (M_w/M_n)

Weight-average molecular weight (M_w) and number-average molecular weight (M_n) were measured under conditions (1) to (8) below by a gel permeation chromatograph (GPC) method, and the molecular weight distribution (M_w/M_n) of a polymer was determined.

(1) Instrument: HLC-8020 manufactured by Tosoh Corporation

- (2) Separation column: GMH-XL (2 columns in tandem) manufactured by Tosoh Corporation
- (3) Measurement temperature: 40°C
- (4) Carrier: tetrahydrofuran
- (5) Flow rate: 0.6 mL/min
- (6) Amount injected: 5 μ L
- (7) Detector: differential refractometer
- (8) Molecular weight standard: standard polystyrene

5. Fuel economy

A strip-shaped test piece having a width of 1 or 2 mm and a length of 40 mm was stamped out from a sheet-shaped vulcanized molding and used for testing. The loss tangent ($\tan\delta$ (70°C)) at 70°C of the test piece was measured using a viscoelastometer (Ueshima Seisakusho Co., Ltd.) under conditions of a strain of 1% and a frequency of 10 Hz. The smaller this value, the better the fuel economy.

Example 1

A 20 L capacity stainless polymerization reactor was washed, dried, flushed with dry nitrogen, and charged with 10.2 kg of hexane (specific gravity 0.68 g/cm³), 547 g of 1,3-butadiene, 173 g of styrene, 6.1 mL of tetrahydrofuran, and 5.0 mL of ethylene glycol diethyl ether. Subsequently, 11.1 mmol of bis(diethylamino)methylvinylsilane and 13.1 mmol of *n*-butyllithium were poured in as a cyclohexane solution and an *n*-hexane solution respectively, and polymerization was started.

Copolymerization of 1,3-butadiene and styrene was carried out while continuously supplying the monomers to the polymerization reactor at a stirring speed of 130 rpm and a polymerization reactor internal temperature of 65°C. The amount of 1,3-butadiene supplied during the entire polymerization was 821 g, and the amount of styrene supplied was 259 g.

Following this, the polymer solution thus obtained was stirred at a stirring speed of 130 rpm, 11.1 mmol of 3-diethylaminopropyltriethoxysilane was added

thereto, and stirring was carried out for 15 minutes. 20 mL of a hexane solution containing 0.54 mL of methanol was added to the polymer solution, and the polymer solution was stirred for a further 5 minutes.

To the polymer solution were added 1.8 g of 2-*tert*-butyl-6-(3-*tert*-butyl-2-hydroxy-5-methylbenzyl)-4-methylphenyl acrylate (product name: Sumilizer GM, manufactured by Sumitomo Chemical Co., Ltd.), and 0.9 g of pentaerythrityl tetrakis(3-laurylthiopropionate) (product name: Sumilizer TP-D, manufactured by Sumitomo Chemical Co., Ltd.). Subsequently, the polymer solution was evaporated at normal temperature for 24 hours, and further dried under vacuum at 55°C for 12 hours, thus giving a polymer. The results of evaluation of the polymer are given in Table 1.

100 parts by weight of the polymer thus obtained, 78.4 parts by weight of silica (product name: Ultrasil VN3-G, manufactured by Degussa, Inc.), 6.4 parts by weight of a silane coupling agent (product name: Si69, manufactured by Degussa, Inc.), 6.4 parts by weight of carbon black (product name: DIABLACK N339, manufactured by Mitsubishi Chemical Corp.), 47.6 parts by weight of an extender oil (product name: X-140, manufactured by Kyodo Sekiyu), 1.5 parts by weight of an antioxidant (product name: Antigene 3C, manufactured by Sumitomo Chemical Co., Ltd.), 2 parts by weight of stearic acid, 2 parts by weight of zinc oxide, 1 part by weight of a vulcanization accelerator (product name: Soxinol CZ, manufactured by Sumitomo Chemical Co., Ltd.), 1 part by weight of a vulcanization accelerator (product name: Soxinol D, manufactured by Sumitomo Chemical Co., Ltd.), 1.5 parts by weight of a wax (product name: Sunnoc N, manufactured by Ouchi Shinko Chemical Industrial Co., Ltd.), and 1.4 parts by weight of sulfur were kneaded by means of a Labo Plastomill to prepare a polymer composition. The polymer composition thus obtained was molded into a sheet using a 6 inch roll, and the sheet was vulcanized by heating at 160°C for 45 minutes, thus giving a vulcanized sheet. The results of evaluation of the physical properties of the vulcanized sheet are given in Table 1.

Comparative Example 1

A 5 L capacity stainless polymerization reactor was washed, dried, flushed with dry nitrogen, and charged with 2.55 kg of hexane (specific gravity 0.68 g/cm³), 137 g of 1,3-butadiene, 43 g of styrene, 1.5 mL of tetrahydrofuran, and 1.2 mL of ethylene glycol diethyl ether. Subsequently, an *n*-hexane solution of 3.6 mmol of *n*-butyllithium was charged therein, and copolymerization of 1,3-butadiene and styrene was carried out for 2.5 hours. During polymerization, the stirring speed was 130 rpm, the polymerization reactor internal temperature was 65°C, and the monomers were supplied continuously to the polymerization reactor. The amount of 1,3-butadiene supplied was 342 g, and the amount of styrene supplied was 108 g.

After the polymerization had been carried out for the 2.5 hours, a solution of 2.8 mmol of bis(diethylamino)methylvinylsilane as a cyclohexane solution was charged into the polymerization reactor under conditions of a stirring speed of 130 rpm and a polymerization reactor internal temperature of 65°C, and stirring was carried out for 30 minutes.

Subsequently, 20 mL of a hexane solution containing 0.14 mL of methanol was charged into the polymerization reactor, and the polymer solution was stirred for 5 minutes.

To the polymer solution were added 1.8 g of 2-*tert*-butyl-6-(3-*tert*-butyl-2-hydroxy-5-methylbenzyl)-4-methylphenyl acrylate (product name: Sumilizer GM, manufactured by Sumitomo Chemical Co., Ltd.), and 0.9 g of pentaerythrityl tetrakis(3-laurylthiopropionate) (product name: Sumilizer TP-D, manufactured by Sumitomo Chemical Co., Ltd.). Subsequently, the polymer solution was evaporated at normal temperature for 24 hours, and further dried under vacuum at 55°C for 12 hours, thus giving a polymer. The results of evaluation of the polymer are given in Table 1.

100 parts by weight of the polymer thus obtained, 78.4 parts by weight of silica (product name: Ultrasil VN3-G, manufactured by Degussa, Inc.), 6.4 parts by weight of a silane coupling agent (product name: Si69, manufactured by Degussa,

Inc.), 6.4 parts by weight of carbon black (product name: DIABLACK N339, manufactured by Mitsubishi Chemical Corp.), 47.6 parts by weight of an extender oil (product name: X-140, manufactured by Kyodo Sekiyu), 1.5 parts by weight of an antioxidant (product name: Antigene 3C, manufactured by Sumitomo Chemical Co., Ltd.), 2 parts by weight of stearic acid, 2 parts by weight of zinc oxide, 1 part by weight of a vulcanization accelerator (product name: Soxinol CZ, manufactured by Sumitomo Chemical Co., Ltd.), 1 part by weight of a vulcanization accelerator (product name: Soxinol D, manufactured by Sumitomo Chemical Co., Ltd.), 1.5 parts by weight of a wax (product name: Sunnoc N, manufactured by Ouchi Shinko Chemical Industrial Co., Ltd.), and 1.4 parts by weight of sulfur were kneaded by means of a Labo Plastomill to prepare a polymer composition. The polymer composition thus obtained was molded into a sheet using a 6 inch roll, and the sheet was vulcanized by heating at 160°C for 45 minutes, thus giving a vulcanized sheet. The results of evaluation of the physical properties of the vulcanized sheet are given in Table 1.

(Table 1)

		Ex. 1	Comp. Ex. 1
Mooney Viscosity	-	45	38
Vinyl content	%	59	59
Styrene unit content	wt %	25	25
Molecular weight distribution	-	1.23	1.14
Content of the constituent unit of formula (I)	mmol/g (polymer)	0.00617	0.00622
Fuel economy tan δ (70°C)	-	0.119	0.197

The content of the constituent unit of formula (I) in all of the polymers obtained in Example 1 was 0.00617 mmol/g (polymer), and the content of the constituent unit of formula (I) in the polymer obtained in Comparative Example 1 was 0.00622 mmol/g (polymer).

CLAIMS

1. A conjugated diene polymer comprising a conjugated diene-based constituent unit and a constituent unit of formula (I) below, at least one terminus of the polymer being modified by a compound of formula (II) below,

wherein X^1 , X^2 , and X^3 independently denote a group of formula (Ia) below, a hydroxy group, a hydrocarbyl group, or a substituted hydrocarbyl group, and at least one of X^1 , X^2 , and X^3 is a group of formula (Ia) below or a hydroxy group,

wherein R^1 and R^2 independently denote a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl group, or a substituted silyl group, and R^1 and R^2 may be bonded so as to form, together with the nitrogen atom, a ring structure,

wherein n denotes an integer of 1 to 10, R^3 , R^4 , and R^5 independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1 to 4 carbon atoms, at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group, and A denotes a nitrogen atom-containing functional group.

2. The polymer according to Claim 1, wherein R^1 and R^2 in formula (Ia) are hydrocarbyl groups having 1 to 6 carbon atoms.

3. The polymer according to Claim 1 or 2, wherein two of X^1 , X^2 , and X^3 of formula (I) are groups of formula (Ia) or hydroxy groups.

4. The polymer according to any one of Claims 1 to 3, wherein A in formula (II) is a group of formula (IIa) below,

wherein R^6 and R^7 independently denote a group having 1 to 6 carbon atoms, which may have at least one type of atom selected from the atomic group consisting of a nitrogen atom, an oxygen atom, and a silicon atom, R^6 and R^7 may be bonded so as to form, together with the nitrogen atom, a ring structure, and R^6 and R^7 may be a single group bonded to the nitrogen via a double bond.

5. The polymer according to any one of Claims 1 to 4, wherein the vinyl bond content of the conjugated diene polymer is not less than 20 mole % and not more than 70 mole % per 100 mole % of the conjugated diene-based constituent unit.

6. A conjugated diene polymer composition comprising the conjugated diene polymer according to any one of Claims 1 to 5 and a filler.

7. The composition according to Claim 6, wherein the amount of filler combined is 10 to 150 parts by weight per 100 parts by weight of conjugated diene polymer.

8. A method for producing a conjugated diene polymer, comprising steps A and B:

step A: polymerizing monomers comprising a conjugated diene and a vinyl compound of formula (III) below in a hydrocarbon solvent in the presence of an alkali metal catalyst to produce a polymer having an alkali metal originating from the catalyst at at least one terminus of a polymer chain comprising a conjugated diene-

based monomer unit and a monomer unit based on the vinyl compound of formula

wherein X^4 , X^5 , and X^6 independently denote a group of formula (IIIa) below, a hydrocarbyl group, or a substituted hydrocarbyl group, and at least one of X^4 , X^5 , and X^6 is a group of formula (IIIa) below,

wherein R^8 and R^9 independently denote a hydrocarbyl group having 1 to 6 carbon atoms, a substituted hydrocarbyl group having 1 to 6 carbon atoms, a silyl group, or a substituted silyl group, and R^8 and R^9 may be bonded so as to form, together with the nitrogen atom, a ring structure; and

step B: reacting the resulting polymer in step A with a compound of formula (II):,

wherein n denotes an integer of 1 to 10, R^3 , R^4 , and R^5 independently denote a hydrocarbyl group having 1 to 4 carbon atoms or a hydrocarbyloxy group having 1 to 4 carbon atoms, at least one of R^3 , R^4 , and R^5 is a hydrocarbyloxy group, and A denotes a nitrogen atom-containing functional group.

9. The method according to Claim 8, wherein R^8 and R^9 in formula (IIIa) are hydrocarbyl groups having 1 to 6 carbon atoms.

10. The method according to Claim 8 or 9, wherein two of X^4 , X^5 , and X^6 of

formula (III) are groups of formula (IIIa).

11. The method according to any one of Claims 8 to 10, wherein A in formula (II) is a group of formula (IIa) below,

wherein R^6 and R^7 independently denote a group having 1 to 6 carbon atoms, which may have at least one type of atom selected from the atomic group consisting of a nitrogen atom, an oxygen atom, and a silicon atom, R^6 and R^7 may be bonded so as to form, together with the nitrogen atom, a ring structure, and R^6 and R^7 may be a single group bonded to the nitrogen via a double bond.
