(54) Title: AUTOMATED GUEST ACTIVITY DETECTION

FIG. 1

System 100

(57) Abstract: A system for predicting a particular intended action of a guest on a resort property is provided, the system including a server configured to be connected to and to receive data from a mobile device of the guest or via camera images of the guest; a plurality of interaction devices, each of the interaction devices being configured to connect to the mobile device when the guest is within a particular distance of a respective interaction device and/or capture digital images of the guest, wherein the server is configured to obtain guest information from the respective interaction device; and a processor configured, based on the guest information, to make a prediction of the guest's intended action or destination; and to initiate a business workflow within the resort property based upon the prediction of that guest's intended action or destination.
