(54) Title: SECURE FILE TRANSFER METHOD AND SYSTEM

G00002

(57) Abstract: A method and system for secure transfer of data files from one computer (10) to another (11). The data file is wrapped or encrypted within an executable file and may only be accessed again by unwrapping or decrypting the data file with a unique key code. The unique key code is effectively held in escrow until an intended recipient of the data file has verified his or her identity to a sender of the data file by way of various verification techniques.
