(54) Title: WIRELINE SUBSEA METERING HEAD AND METHOD OF USE

(57) Abstract: The present invention comprises a system and method to measure positioning with respect to deploying a subsea load, the system comprising a subsea metering head having a position sensor; a controllable winch operatively connected to the winch flexible cable; and a controller operatively in communication with the controllable winch and the position sensor. The controller is capable of controlling the controllable winch in response to a received position feedback sensor signal. It is emphasized that this abstract is provided to comply with the rules requiring an abstract which will allow a searcher or other reader to quickly ascertain the subject matter of the technical disclosure. It is submitted with the understanding that it will not be used to interpret or limit the scope of meaning of the claims.
