

ABSTRACT

The present disclosure relates to an indication method, an indication apparatus, and a storage medium. The indication method is performed by a terminal, and comprises: determining a first message, wherein the first message is used to indicate a configuration parameter of joint channel estimation executed by a network side device. According to the present disclosure, the starting of joint channel estimation by a network side device and a time window for executing joint channel estimation can be indicated to a terminal. The problem of being unable to indicate the starting of joint channel estimation and a time window for executing joint channel estimation to a terminal is thus solved.
