

ABSTRACT

THERMOSETTING RESIN COMPOSITION CONTAINING POLYMER HAVING
SPECIFIC TERMINAL STRUCTURE

Novel thermosetting resin composition is provided. A thermosetting resin
5 composition containing a polymer having a repeating structural unit of the following
Formula (1-a):

(wherein each of R¹ and R² is independently a hydrogen atom, a C₁₋₄ alkyl group, phenyl
group, or a C₃₋₆ cyclic alkyl group, X is a single bond or a divalent organic group, and Y
10 is a divalent organic group), and a terminal structure of the following Formula (1-b):

(wherein Q is a C₁₋₅ alkylene group, phenylene group in which at least one hydrogen
atom may be substituted by a halogen atom, or a 5- or 6-membered divalent saturated
heterocyclic group containing at least one nitrogen atom, and R³ is a hydrogen atom or
15 methyl group).
