(54) **Title:** METHOD OF PROCESSING REQUESTS FOR DIGITAL SERVICES

(57) **Abstract:** A method of processing requests for different digital services hosted by respective service entities is disclosed. The method comprises receiving a request packet from a communication device, the request packet includes source and destination identifiers, determining which one of the different digital services the communication device is requesting a service, based on the destination identifier, authenticating the request packet based on the source identifier to determine an access permission of the communication device for accessing the determined digital service, and if the access permission is granted, modifying the request packet and forwarding the modified request packet based on the destination identifier to the determined digital service for processing. A related processor and middleware system are also disclosed.
