

ABSTRACT

"Front panel of an electronic apparatus, provided with a push-button

A front panel (1) carries a push-button (2) corresponding to an actuating rod (3) which projects from the front surface of the chassis of the electronic apparatus. The push-button (2) has been provided with a spring (7) which urges the button against the actuating rod and causes it to be moved into the front panel if the latter is removed from the
5 apparatus.

Used, for example, in a car-radio for controlling a cassette player.
