(54) Title: PREVENTING OUT-OF-MEMORY CONDITIONS FOR BROWSER APPLICATIONS

(57) Abstract: A network computer system can monitor browser memory usage by a browser application during a user interface (UI) design session in which a user interacts with a UI design file via a browser application. The system can detect the browser memory usage by the browser application exceeding a first memory threshold, and in response, the system can provide, on a display of the computing device, a menu of a plurality of UI pages of the UI design file, where each UI page of the plurality of UI pages presented in the menu includes a memory usage indicator.
