(54) Title: CELL SELECTION METHODS AND RELATED COMPOSITIONS

FIG. 2B

(57) Abstract: Provided are methods of selecting for cells that comprise two or more separate expression constructs. In certain embodiments, the methods comprise contacting a population of cells with two or more separate expression constructs under conditions in which the two or more expression constructs are delivered to cells of the population of cells. The two or more separate expression constructs comprise a first expression construct that encodes a fusion protein comprising a selection marker, a protein localization tag, and a protease cleavage site disposed between the selection marker and the protein localization tag. The second expression construct encodes a protein required for cell surface expression of the selection marker. Such methods further comprise selecting for cells exhibiting cell surface expression of the selection marker. Related cells, compositions, kits and therapeutic methods are also provided.
