(54) Title: SYSTEMS AND METHODS FOR CLUSTERING SEARCH RESULTS

(57) Abstract: A system (120) forms search results clustered by address or telephone number. When clustering by address, the system (120) may receive a search query and identify a geographical area of interest based, at least in part, on the search query. The system (120) may identify documents that are associated with addresses located within the geographical area of interest, group the identified documents into clusters based, at least in part, on the addresses located within the geographical area of interest, and present the clusters as the search results. When clustering by telephone number, the system (120) may receive a search query that includes at least one portion of a telephone number and identify documents that are associated with telephone numbers that match the at least one portion of the telephone number. The system (120) may group the identified documents into clusters based on the telephone numbers included in the identified documents and present the clusters as the search results.
