【ABSTRACT】

The present invention relates to an oil-in-water type emulsion and a cosmetic composition comprising the same and, more specifically, to an oil-in-water type emulsion in which an oil-phase part comprising a C12-C22 fatty acid, an oil and an emulsifier is dispersed in a water-phase part comprising a viscosity increasing agent, a neutralizing agent and water, wherein the oil-in-water type emulsion comprises a starch-based viscosity increasing agent as the viscosity increasing agent, and to a cosmetic composition comprising the same. In spite of being an emulsified composition obtained through the neutralization of fatty acids, the oil-in-water type emulsion according to the present invention has excellent stability and is also excellent in view of the feeling of use, skin irritation, and stability on the skin, and thus enables the manufacture and use of various formulations of chemical products.
