(54) Title: ELECTRONIC PROGRAM GUIDE USING MARKUP LANGUAGE

(57) Abstract

An interactive television program guide is provided. Program guide display elements are arranged and styled using markup language documents. These markup language documents may also indicate and select program guide functions. The program guide interprets the markup language documents and generates the display screens and program guide functionality without user intervention. The program guide may also be updated by supplying new markup language documents that modify display screens and program guide functionality. The markup language documents may be supplied by a main facility or a television distribution facility.
